ABOUT TRADE ESSENTIALS

Trade Essentials is a research project funded under the Pan-Canadian Innovations Initiative, Human Resources and Skills Development Canada, in partnership with the Apprenticeship Section of the PEI Department of Innovation and Advanced Learning.

The Trades Essentials program was designed to increase participation in trades by providing a well-defined pathway for each client to build on present skills and access services necessary for success in his or her occupation.

This new concept, focusing on essential skills and recognition of prior learning (RPL), provides assessment, interventions and coordination of services for clients. This is the first project to provide a seamless learning path to trades certification.

To create this path, a number of educational tools were created and tested for thirteen trades. These tools are available in both official languages for use in any jurisdiction.

The Tools:

- **Trade Specific Essential Skills Inventories (ESI)**
  Through a dynamic assessment process using contextualized Essential Skills assessments, clients can identify individual proficiency levels of the following Essential Skills: reading text, document use, numeracy, oral communication, writing and using computers.
  The Essential Skills Inventory and the Technical Skills Inventory assist the client to develop a learning path which includes measurable targets to reach his/her individual goals.

- **Trade Specific Essential Skills Curriculum**
  Trade specific curriculum frameworks have been created for each of the thirteen trades along with trades specific curriculum guidelines and suggested resource materials.

- **Technical Skills Inventories (TSI)**
  Through a self assessment process, clients are able to identify their individual trade specific skills.

The Thirteen Trades:

*Automotive Service Technician - Cabinet Maker - Carpenter - Construction Electrician – Cook - Industrial Electrician – Machinist - Metal Fabricator - Oil Burner Mechanic - Plumber - Refrigeration and Air Conditioning Mechanic - Steamfitter/Pipefitter - Welder*
ACKNOWLEDGEMENTS

Materials from the Trade Essentials Manuals may be reproduced for individual educational purposes only. No part of this material may be reproduced or used for any commercial purpose or sold by any person other than the owner.

This project is the result of the collaboration of the following dedicated adult educational consultants in Prince Edward Island:

Ruth Rogerson
Karen Chandler
Gaelyne MacAulay
Karen Dempsey.

Our sincere thanks to the Trade Essentials Advisory Committee for their suggestions, input and ongoing support.

We also recognize the valuable contribution made by the apprentices and challengers who volunteered to participate in this research project. It is our sincere hope that they have gained as much from their participation as we have. We also hope that their contributions will assist many more tradespeople to reach their goals.

We are grateful to the assessors, tutors and classroom instructors who patiently piloted our materials and who gave back invaluable insights and advice.

All Trade Essentials materials have been validated by teams of tradespeople who hold Certificates of Qualification, Red Seal Endorsement. We gratefully acknowledge the crucial contribution made by the following team members:

Glenn Ellsworth (Automotive Service Technician)
Cecil Banks (Automotive Service Technician)
Scott Bagnall (Automotive Service Technician)
Darcy MacKenzie (Automotive Service Technician)
Elmer MacDougall (Cabinet Maker)
Graham Hicken (Cabinet Maker)
Gerard Lund (Carpenter)
Leo MacDonald (Carpenter)
R yan Rogerson (Carpenter)
Darren Richards (Construction Electrician)
Mark Seaman (Construction Electrician)
Ken Zakem (Cook)
Rod Lukeman (Cook)
Barry Strongman (Industrial Electrician)
Gregg Francis (Industrial Electrician)
Jake Shaw (Machinist)
Sue LeFort (Machinist)
John Hebert (Metal Fabricator / Welder)
Joe Johnson (Metal Fabricator)
Jim Arsenault (Metal Fabricator)
Kent Mitchell (Oil Burner Mechanic / Steamfitter-Pipefitter)
Rod Arsenault (Oil Burner Mechanic / Refrigeration and Air Conditioning Mechanic)
Kent Mitchell (Plumber)
Scott Carter (Plumber)
Charlie Redmond (Refrigeration and Air Conditioning Mechanic)
Scott Lacey (Steamfitter-Pipefitter)
Vincent Jenkins (Welder)

Thanks to the Apprenticeship Section of the PEI Department of Innovation and Advanced Learning and to the Government of Canada’s Pan-Canadian Innovation Initiative for financial assistance and for continuing support to trades and apprentices in Canada.

Materials were piloted with Carpenters, Steamfitter/Pipefitters, Welders, Automotive Service Technicians, Plumbers and Cooks.</td>
</tr>
</tbody>
</table>
1 SECTION 1

1.1 Introduction

The Essential Skills Inventories were developed during a three-year Trade Essentials project whose mandate was to develop Essential Skills assessments and curricula for 13 trades. These materials provide an opportunity for tradespeople to identify and update the Essential Skills required for their respective trades as an important step towards successful trade certification. The Essential Skills Inventory is a tool used to identify both strengths and weaknesses in trade-specific Essential Skills profiles.

2 SECTION 2

2.1 Interactive Assessment

Adult learners have different needs than “traditional” students so strategies must be developed to engage, motivate and build their confidence.

The Essential Skills Inventories use an innovative, interactive (dynamic) approach to assessment that is both client-centred and asset-based. An asset-based approach compares the apprentices’ present Essential Skills to the skills needed for their trade, connecting what they already know with what they need to learn.

The Inventory is a process more than a product and requires skilled and experienced assessors to establish an atmosphere where apprentices are comfortable enough to think about and explore their learning in an Essential Skills context. Assessors need the “inner technology” to be sensitive to the needs of the apprentice and to know when to stop an Essential Skills Inventory if the apprentice is struggling. The interactive assessment explores not only what the apprentice knows and can do, but also, gives an awareness of how the apprentice learns.

This type of assessment can be used in a pre- and post-format but cannot be referred to normative tables for interpretation. It is designed as a starting point for instruction in Essential Skills for the trades.
By using the trade-specific Essential Skills Inventory you can help an apprentice identify those skills to be updated by building upon the skills he/she already has. This process provides immediate, individual feedback to the learner. This is an assessment used for learning, not of learning.

Motivation is fundamental to change and this process helps an apprentice become motivated, engaged and confident in learning. Confidence can never be disconnected from skills. However, the apprentice does need to have a readiness, willingness and an ability to learn in order to be successful. In addition, many adults fear returning to a structured learning environment after a lengthy absence. It is very difficult to discover the learning needs of adults without the creation of a “safe environment”. This is even more evident with those who have the greatest learning needs.

Why do apprentices need to go through this process?

At present, there is neither a process nor a place for those who are already working in a trade to update their trade-related Essential Skills other than completing Block training. Awareness of the trade-specific Essential Skills and the knowledge of the scope of a trade is a starting point on the path to certification. Individual assessments (inventories) followed by appropriate interventions (supports) provide the opportunity for eventual certification in the trade. The objective of this process is to help apprentices be successful in passing certification exams whether they be Block or Interprovincial Red Seal exams.

2.2 Adult Education

It is very important to be mindful of both the principles of Adult Education and the characteristics of adult learners.

2.2.1 Principles of Adult Education

- Adults must want to learn.
  Trade Essentials clients have stated the primary reason for participating in an Essential Skills program and

---

1 Adapted from www.literacy.ca, Movement for Canadian Literacy, Principles of Adult Education
obtaining certification was personal satisfaction, not job mobility or an increase in pay.

- **Adults will learn only what they believe they need to learn.**
  They have a practical approach to learning as they need to know how this learning affects them now.

- **Adults learn by doing.**
  Ninety-eight percent of the apprentices in the Trade Essentials Project identified their preferred learning style as kinesthetic.

- **Adult learning focuses on problems and the problems must be realistic.**
  The Essential Skills Inventories use trade-specific materials and focus on the apprentice’s ability to solve problems since that is the nature of their jobs.

- **Experience affects adult learning.**
  All apprentices bring a varied background of acquired skills and knowledge together with an attitude about learning.

- **Adults learn best in an informal situation.**
  Many of the apprentices indicated they appreciate the opportunity to learn with their peers at a time convenient to them (evenings, Saturdays) and in a setting where they are comfortable sharing their knowledge with others. For the first time, there is a place dedicated to apprentices where they can access the information and the support they need.

- **Adults want guidance.**
  While experienced in their individual trades, apprentices may need help to create a learning plan to meet their objective.

### 2.2.2 Characteristics of Adult Learners

- **Adult students are mature people and prefer to be treated as such.**
  Being “lectured at” can cause resentment and frustration. Apprentices are usually kinesthetic learners and need to be active when

---

2 Adapted from [www.assetproject.info](http://www.assetproject.info). *Learner Centred Methodologies*, Wynne, R.
learning. They also learn from each other in a classroom setting.

- **Adults are goal/relevancy-oriented.** Adults need to know why they are learning because their needs are concrete and immediate. They will be more interested in theory if it links to practical application.

- **Adults may have insufficient confidence.** A number of apprentices may have had prior experiences within the education system that have led to feelings of inadequacy, fear of study and failure. Many apprentices have been out of a formal learning situation for 20 years or more. Returning to a classroom environment can be daunting and challenging.

- **Adults are often tired when they come to class as they are juggling work, family and other responsibilities.** Most apprentices are working full time and are attending a program in the evenings and on occasional Saturdays. Many drive considerable distances, as well as driving in winter conditions.

- **Adults learn best when they are ready to learn and when they have identified their own learning needs as opposed to being controlled by someone else.** They want to choose options based on their own needs. Providing the apprentices with a chance to self-assess and identify their strengths and weaknesses is an important first step.

- **Adults learn at different rates and in various ways according to their learning styles, educational levels, experiences and relationships.** The first section of the ESI is a Learning Styles Inventory. Most apprentices have never identified their own learning styles and this is often an “aha” moment for them. Being able to use this information for learning and studying techniques is invaluable to them.

- **Adults have accumulated life/work experiences.** They tend to favour learning that draws on their prior skills and knowledge. The Essential Skills Inventory is an assessment for learning, providing an opportunity for each apprentice to realize what he/she already knows and to move forward from that base. The Essential Skills Inventory identifies skills in need of updating using in-context materials and a guided self-
3 SECTION 3

3.1 The Essential Skills Inventory

Conducted in a manner that engages the apprentice and helps build confidence, the completed Inventory provides a picture of the apprentice’s learning needs while recognizing the skills that have already been acquired. The Inventory is as much a process as a product. The time required to complete an Inventory will vary depending on the apprentice but should be completed in one and a half to two hours. Six of the nine Essential Skills are assessed in these Inventories and are in this order: reading text (technical language), document use, numeracy, oral communication, computer use and writing. The Inventory is divided into sections and the section questions are ordered from simple to complex.

3.1.1 Process

Sit beside, not across from, the apprentice as a table or desk impedes good communication and can be interpreted as one person being in a position of authority over another. If a round table is available, use it. Apprentices are not often asked to self assess, but will do so willingly if they are comfortable with the assessor and understand the process.

3.1.2 Essential Skills Profiles

The concept of Essential Skills and Essential Skills Profiles will likely be new to the apprentice. At the beginning of the interview therefore, introduce the trade-specific Essential Skills Profile. Give the apprentice a hard copy of the profile to take away with him/her. Encourage a thorough review of the profile as well as the Essential Skills website (www.hrsdc.gc.ca/essentialskills) for additional information.

When introducing the profile, include these points:

- The profiles are Canadian. They were developed by interviewing fellow tradespersons, supervisors, managers and researchers in workplaces across the country.
Over 350 occupational profiles are available on the website with development ongoing for additional profiles.

Nine skills are identified as core skills common to all occupations. (The Trade Essentials Project developed learning materials for six of the nine Essential Skills).

The Essential Skills are used in different ways and at different degrees of complexity, depending on the occupation.

The complexity levels have nothing to do with Grade levels; they refer to the degree of difficulty of tasks completed at work. A scale of 1-5 is used for complexity levels and, even though there is a range in complexity levels, one must be able to complete tasks at the most complex level.

It is important to keep this discussion brief and framed in a positive manner. Adults do not want to spend time re-learning what they already know so it is helpful to give examples of the advantages of using the profile. Suggestions are: a) a plumbing apprentice may not ever need to know how to solve quadratic equations but will need to be very good at measurement and calculations for such uses as determining grade, elevation and slope, b) an apprentice may not have to read an entire operating manual but will need to find and use specific pieces of information from the manual, c) an apprentice will have to be very accurate when completing an incident or an accident report but will not be required to write an essay. The writing, in this instance, does not have to be long or complicated but it does need to be accurate and precise. It is important to make the connections between what they have learned in a more "academic" setting and how to apply those skills in a work setting.

### 3.1.3 Preparation

Print the apprentice’s copy of the ES Inventory on light-coloured paper, preferably beige, as it reflects less light than white paper so is easier to read; the black print actually is clearer on a pastel background. The font used is Verdana, a sans serif font, 11 point, which is slightly easier to read than a serif font; 11 point is also easier to read than a smaller font.

Gather the supplies you need prior to beginning the Essential Skills Inventory:

- scientific calculator
- pencils and an eraser
- intake form
- skills summary form
- ESI printed on coloured paper
- Answer Key
The rationale for this formatting is that there is a need to provide equal opportunity for all apprentices without compromising standards. No two learners (apprentices) are the same. There is a possibility that an apprentice could have a learning disability and unless the apprentice has disclosed that information or provided documentation, you do not know who is at risk. Using standard formatting does not give an advantage to anyone.

Before you begin the actual Inventory, it is very important to explain to the apprentice that you will complete the Skills Summary Form as the assessment proceeds and you will give him/her a copy at the end of the interview. This avoids any discomfort that would be caused if the apprentice does not know why you are recording information during the Inventory. It is important to provide immediate feedback from the Inventory so the apprentice has a picture of the Essential Skills he/she needs to update. This also helps to mitigate anxiety prior to beginning an intervention.

Before you begin an Inventory, be sure to have these items:

- Two copies of the trade-specific Essential Skills Profile (one for the apprentice and one for you).
- Appropriate forms. You will need copies of the Intake Form and the Skills Summary Form (find samples in Appendix A).
- A copy of the Essential Skills Inventory printed on pastel-coloured paper, preferably beige or buff. You may want to work from a single copy with the apprentice or have a separate copy for yourself. Do whatever is comfortable for you and the apprentice.
- A copy of the Answer Key.
- A pencil and an eraser.
- A basic scientific calculator.

Although an apprentice may use a programmable or trade-specific calculator on the worksite, these types of calculators cannot be used when writing a Block or an Interprovincial exam. However, the prudent use of a basic scientific calculator should be encouraged while completing the Essential Skills Inventory. (One suggestion is the Casio FX-260 Solar.) A calculator is also a time saver on the job which results in increased efficiency and cost savings. Therefore the apprentice needs to be very familiar with its use. For anyone with a learning disability, the calculator can be a particularly helpful tool. The use of a calculator does
not, however, preclude the apprentice’s ability to understand mathematical concepts and to estimate reasonable answers.

3.1.4 Sections of the Inventory

3.1.4.1 Learning Styles

Briefly explain the concept of learning styles (refer to Appendix B for more information). Then ask the apprentice to read each of the statements in the Inventory relatively quickly. Tell him/her to check any statements that are true personally, all or most of the time. It is best for the apprentice to go with a first reaction to the statement rather than to spend too much time thinking about it. If a statement does not apply, it is to be left blank. If there are three or more checks in one category, that indicates a preferred learning style. A pattern will emerge from the answers; most apprentices will have more than one learning style.

Follow the same instructions for the section on learning in a group or learning alone. This is important information for the apprentice and for the instructor.

3.1.4.2 Technical Language (Reading text)

This section begins with lists of words that are contextualized to the trade and have been taken from either the Essential Skills Profile (ESP) or the National Occupational Analysis (NOA) glossary. The lists are arranged in order from simple to complex, each list containing ten words.

Ask the apprentice to choose a list he/she would be comfortable reading aloud. As long as the apprentice has seven out of ten words correct in any list, ask him/her to continue reading aloud as far as possible with the lists. Some apprentices will begin reading at a lower level and continue to the end of list four; others will read list four on the first try. It is important for the apprentice to begin reading at a point of comfort and to proceed from there. If an apprentice struggles with the first list, stop there. Use the list to indicate a beginning point for the technical reading excerpts. For example, if an apprentice reads six out of ten words (less than seven) in list three, refer to section two in the reading. A crucial aspect of the technical reading is to know when to stop if the apprentice is struggling.
**with a skill.** This is one of the most important skills for you to have as an assessor, that is, to be sensitive and responsive to the needs of each apprentice.

Before using the reading excerpts, ask each apprentice to read the list of pseudowords (nonsense words). Explain the reason for using this list; that decoding words is an important reading skill for comprehension, speed and fluency. If the apprentice struggles with this list and cannot read most of the words, this is a warning that the apprentice may have reading difficulties.

The reading excerpts consist of trade-related materials. A readability index has been completed on each passage as a guide for the difficulty of the reading. Give the apprentice the appropriate reading. Ask him/her to read the questions first, then find the answers to the questions from the excerpt. Explain that the answers to certain questions are not direct matches of information but require “reading between the lines” to find the answer. The questions have been intentionally placed at the beginning of the reading to help the apprentice become a “directed” reader.

Record the section(s) with which the apprentice experiences difficulty (if any). While the reading is not timed, you will want to record if an apprentice takes an exceptionally long time to answer the questions. All apprentices need to be able to read and understand at a post–secondary level (level 3) if they are to be able to confidently use materials at work and to keep pace with workplace changes.

If the apprentice does not need to update reading skills, complete the Skills Summary Form with “No updating required”. If the apprentice has difficulty answering any questions in a particular section, record the Section Number on the Skills Summary Form.

**3.1.4.3 Document Use**

The document use sections contain information that is presented in a format other than text. There may be charts, graphs, tables, schematics and/or blueprints that are trade-related. There is always a question taken from the National Occupational Analysis (NOA), in the form of a pie chart that explains the construction of the Interprovincial (Red Seal) exam and the percentage of questions on each topic (block) for the particular trade. This question not only indicates if
the apprentice can find and use information from a pie chart but also gives you, the assessor, the opportunity to give a brief explanation of the exam format and the scope of the specific trade.

Record the Section and the type of document with which an apprentice experiences difficulty. If there is no apparent difficulty, record “No updating required”.

3.1.4.4 Numeracy

The numeracy sections are arranged from simple to complex and are based on the Math Skills Summary identified in the Essential Skills Profile for each trade. Not all skills are included for the sake of brevity of the Inventory but enough are included to give an instructor a picture of the skills of the apprentices. There is a Math Legend included in each Inventory that identifies the math concept illustrated by each question. Refer to this as you proceed through the Inventory and record the skills needing updates on the Skills Summary Sheet.

Section 1 (S-1) begins with using whole numbers. It is important to have a place for the apprentice to begin where he/she is comfortable and confident and then proceed to more difficult concepts. The apprentice will likely choose to skip the work with whole numbers. An apprentice does not have to write the answers to all the questions as this is often far too time-consuming. You can decide to ask the apprentice how to find the answer. The process is as important as the product. Stop Inventory if the apprentice is struggling. The numeracy sections take the most amount of time when completing an Inventory.

Record the section number and the concepts the apprentice needs to update. This information will be required by both the apprentice and the instructor or tutor; it will also be used for a post-inventory after instruction or self-study has occurred. If your apprentice can answer all the questions, record “No updating required”.

3.1.4.5 Oral Communication

There are two parts to the Oral Communication section of the Essential Skills Inventory. The Speaking Skills Rating Scale is to be completed by you, the assessor; the other is a self-assessment completed by the apprentice. After having
spent one and a half to two hours with the apprentice, you will be able to complete most sections of the scale. If not, document a particular skill as “not assessed” or “not applicable”. The remaining questions are taken directly from the Essential Skills Profile for the trade. The questions (tasks) are arranged in order from simple to complex. The self-assessment scale mirrors the stages of learning or skill building, that is, “needs help”, “can do alone” and “can help an apprentice”. This is an opportune time to mention the fact that it is a responsibility of being a journeyperson to mentor other apprentices.

If the journeyperson indicates he/she cannot help an apprentice, record that updating is required.

3.1.4.6 Computer Use

The questions in the Computer Use section may reflect the information in the trade-specific Essential Skills Profile or may go beyond that profile. In a knowledge-based economy, it is realistic to expect a certain level of computer literacy regardless of the trade in which one is employed. The Computer Use questions reflect the basic skills required. Changes in technology will continue to occur rapidly so it is critical to have at least a basic knowledge of computer use.

Record the skills to be updated. If there are no needs identified, record “No updating required”.

3.1.4.7 Writing

The first questions in the writing section are examples taken directly from the Essential Skills profile and range in difficulty from simple to complex. The scale used reflects the stages of learning: “needs help”, “can do alone”, and “can help an apprentice”. One additional question pertains to the preparation of a resumé, a skill required by all tradespersons.

The last question is a writing sample and is common to all the Inventories. The writing sample provides an opportunity for you to observe if the apprentice is able to:

- use cursive writing (as compared to printing)
- write legibly
- complete the activity with ease or struggle to write a sentence or two
ESSENTIAL SKILLS INVENTORY ASSESSOR’S GUIDE

- put thoughts on paper in a logical order
- use punctuation correctly
- spell correctly
- use correct grammar

Record on the Skills Summary Form areas in need of updating, or use “No updating required”.

4 SECTION 4

4.1 Essential Skills Inventory Records

You will have completed the Skills Summary form by the end of the Inventory. Using this process as a means of learning the apprentice’s strengths and weaknesses provides an opportunity to give each apprentice immediate, individual and confidential feedback about his/her Essential Skills needs. Inform the apprentice that a copy will go to an instructor or a tutor if an Essential Skills intervention is planned. Both the apprentice and the instructor are then cognizant of the Essential Skills needs of each apprentice.

The information from the Skills Summary can be summarized in graph form (bar graph recommended) individually, or as a group dependent on specific needs. It is also helpful for an instructor to have an accompanying narrative.

5 SECTION 5

5.1 Essential Skills Post-Inventory

5.1.1 Post-Inventory Directions

The post-inventory will be different for each apprentice dependent upon his/her learning needs as identified in the original ES Inventory. Only the skills that were to be updated are used to create the post-inventory. There is a scale used to indicate an apprentice’s improvement or mastery of the skills. This post-inventory can be used at a time determined either by the instructor or after a specific number of intervention hours.

The administrative directions for the post-inventory are that it is to be given under standard test conditions, that is, each
apprentice is to complete the inventory independently and without assistance. The time required for each post-inventory will vary, but each apprentice must be allowed the time required for completion.

5.1.2 Post-Inventory Reporting Form

See Appendix A for a sample Post-Inventory form.
DATE: ___________________  TIME IN: ___________________

Interviewer
Essential Skills Post Inventories

The results of the Essential Skills Inventories, completed by each of your apprentices prior to the beginning of your program, indicated the Essential Skills in need of updating for each apprentice.

To track each apprentice’s progress, it is now time to complete a post-inventory of those same skills.

Please administer the Post-Inventory as a “test”, that is, each apprentice is to complete the Inventory **without any help**. **Ask each apprentice to complete only the questions that are marked.** The time required will vary for each apprentice as each post-inventory is different; therefore please give each apprentice the time needed to complete the inventory. Upon completion, return the Inventories to Trade Essentials (with your program coordinator). The results will be returned to you to share with your apprentices. This will be one indication of each apprentice’s readiness to challenge an exam whether it be the IP Red Seal exam or block exam.

If you have any questions, please contact the Trade Essentials office at 620-3623.

Thanks in advance for your cooperation.
Upon completion of the Essential Skills Inventory prior to the beginning of the program, your Essential Skills Summary indicated that you would benefit from instruction in the Essential Skills shown in the chart below as you prepare for licensing in your trade.

The results of the Post Inventory indicate which of your Essential Skills have improved, which need further development and those that appear to meet trade requirements. Please note that “meets trade Essential Skill requirement” means that you had the correct response to each question.

APPENDIX B

EXTRA INFORMATION
The following information is provided as supplemental information for you the interviewer. Because the Essential Skills initial interview is a dynamic assessment involving your input and possible responses to the apprentice, you may need/want additional reference material on both Learning Styles and the Essential Skills required for the various trades.

**Learning style** refers to the way an individual processes information, that is, the way a person learns best. Most people tend to use one sense more than the other. However, a number of people may learn equally well regardless of how information is presented to them. Knowing your learning style is an important key to improving success in a classroom and on exams.

It is important to know *how* one learns, not just *what* one needs to learn. Completion of the Learning Styles section at the beginning of the Essential Skills Inventory will help the apprentice discover his/her learning style. This can often be an “Aha” moment for the apprentice as s/he may not have had access to this information. The learner can then reflect on, gather, or be provided with information about the study and learning techniques suited to his/her individual learning style. This knowledge should contribute to an improvement in the quality and speed of learning.

There are basically three learning styles preferences: auditory (hearing), visual (seeing), and kinesthetic (doing, experiencing).

Visual learners are those who learn best by seeing things. A visual learner may display these characteristics:

- good at spelling but may forget names
- needs quiet time to study
- needs time to think before understanding a lecture
- understands/likes charts
- good with sign language

Auditory learners are those who learn best by hearing things. An auditory learner may display these characteristics:

- not afraid to speak in a group/class
- likes to read aloud to him/herself
- likes oral reports
- good at explaining
- remembers names
- enjoys music
- good at grammar and foreign languages
- may read slowly
- follows spoken directions well
- good in study groups
- finds it difficult to stay quiet for long periods
Kinesthetic learners are those who learn by experiencing / doing things. A kinesthetic learner is one who:

- can’t sit still for long
- may be good at sports
- may not have great handwriting
- likes role playing
- studies with music playing
- takes breaks when studying
- fidgets during lectures

(Adapted from http://homework tips.about.com)

Suggested strategies for studying / learning are:

<table>
<thead>
<tr>
<th>Auditory</th>
<th>Visual</th>
<th>Kinesthetic</th>
</tr>
</thead>
<tbody>
<tr>
<td>Listen to instructions and information orally</td>
<td>Watch for key words to summarize points</td>
<td>Ask questions and participate in discussions whenever possible</td>
</tr>
<tr>
<td>Sit towards the front of the room</td>
<td>Complete readings before class</td>
<td>Do something physical before sitting down to study</td>
</tr>
<tr>
<td>Repeat information silently to yourself</td>
<td>Use visuals like symbols and color in notes</td>
<td>Break reading tasks into small chunks</td>
</tr>
<tr>
<td>Work in quiet areas</td>
<td>Write down what you hear</td>
<td>Highlight, underline or take notes</td>
</tr>
<tr>
<td>Tape important information</td>
<td>Ask for other visual information</td>
<td>Take regular brief breaks to move around</td>
</tr>
<tr>
<td>Use rhymes or jingles to summarize important points</td>
<td>Try to remember important terminology by looking for parts of words already known</td>
<td>Break reading into chunks and write brief summaries</td>
</tr>
<tr>
<td>Create verbal descriptions</td>
<td>Color code notes</td>
<td></td>
</tr>
</tbody>
</table>

</tbody>
</table>

Example: $1500 \text{ Hz} = 1.5 \text{ kHz} = 1.5 \text{ kilohertz} = 1.5 \times 10^3 \text{ Hz}$

Example: $0.007 \text{ A} = 7 \text{ mA} = 7 \text{ milliamps} = 7 \times 10^{-3} \text{ Amps}$
Each different ratio has its own formula. These are shown below.

The ratio of $\frac{\text{opposite}}{\text{hypotenuse}} = \text{sine or sin}$

The ratio of $\frac{\text{adjacent}}{\text{hypotenuse}} = \text{cosine or cos}$

The ratio of $\frac{\text{opposite}}{\text{adjacent}} = \text{tangent or tan}$

**NOTE**

The acronyms for the three ratios are:
- Sine opposite hypotenuse – SOH
- Cosine adjacent hypotenuse – CAH
- Tangent opposite adjacent - TAS

These acronyms are extremely helpful as they can be used to write out the three different formulas and aid in solving trigonometry questions. These three formulas can be changed into three formula triangles and then it is a matter of substituting them into the formula. The three formula triangles are shown in Figure 9.

![Figure 9 – Formula triangles](image)

To use the formula triangles, cover the unknown and complete the remaining calculation. Each formula triangle can be used to construct three variations.

LEARNING STYLES CHECKLIST

Learning by hearing (auditory)

☐ I remember the things I hear better than the things I see.

☐ I learn better when someone explains to me how to do something better than when I follow a diagram.

☐ I find it easier to remember a telephone number I have heard than one I have read.

☐ I prefer to listen to the news on the radio than to read the newspaper.

☐ I remember the times tables by saying them to myself.

☐ After I am introduced to someone, I’m good at remembering his/her name.

Learning by seeing (visual)

☐ I remember what I’ve seen, better than what I have heard.

☐ I remember what happened by seeing the incident in my head.

☐ I remember what I hear by picturing it in my head.

☐ I am good at remembering faces.

☐ When someone says a number, I don’t understand it until I see it written down.

☐ I can add simple numbers which are written down better than numbers that are in my head (e.g., 16+24+10+98).

☐ To remember a car license number, I picture it in my head.
Learning by doing (kinesthetic)

☐ When I put something together, I remember how it works.

☐ I remember certain directions after I have done something once or twice.

☐ I like to do things like simple repairs where I can use my hands.

☐ I can learn best if the instructor uses models, experiments and other practical tools to show what he/she is talking about.

☐ Using concrete examples is a good way for me to improve my math or spelling skills.

☐ I remember telephone numbers if I’ve dialed them a few times.

Learning in a group

☐ I like learning in a group so I can discuss the work with others.

☐ I enjoy helping other people in the group with their work.

☐ If I need to do something, I don’t mind asking the person next to me.

Learning Alone

☐ I can concentrate best if I work on my own.

☐ It’s hard to work if people are talking around me.

☐ I’d be embarrassed to show my mistakes to anyone other than an instructor.

☐ I can’t concentrate if people are moving around the room.

From the article below, answer the following questions.

1. How many square inches are there in a square foot?

2. What is the main difference between a square foot and a board foot?

---

**Square Foot vs Board Foot**

Is there a difference between a square foot and a board foot?

A board foot is equal in volume to a square foot of lumber 1” thick.

A square foot of lumber/flooring, etc., would be 12” x 12” (or similar dimensions totaling 144 square inches), but could be of any thickness.

If you know the thickness, you could calculate the board footage from the square footage. Flooring may be sold by the square foot, since that is the measurement you are likely to take when you are calculating the size of the area to be covered, so it’s a convenient unit of measure for floor coverings.

In one-inch thick lumber or less, the board feet and square feet are the same. We call this surface measure, not square floor measure. Any thickness over one inch must multiply surface measure by the thickness for your board foot measure. But flooring, siding and paneling is usually sold by the square foot, no matter what the thickness. Some mills also sell this by the board foot. Ask before you buy.

www.woodweb.com
FOG Index 10.1
From the article below, answer the following questions.

1. In addition to boosting productivity, what is the advantage of having a downdraft table?

2. How big are “invisible” dust particles?

---

**Efficient, Clean and Safe**

Downdraft tables offer small shops an opportunity to not only improve the health and safety of workers but also to boost production efficiency at the same time.

When cabinetmakers sand wood, either by hand, with an orbital sander or other sanding device, the eye can see sawdust being created. However, it’s the dust that can’t be seen, particles smaller than 10 microns, that pose a bigger threat to cabinetmakers. These “invisible” dust particles can, after prolonged exposure, cause a number of ailments, including several types of cancer.

Whenever efficiency suffers, so does your bottom line. It’s in these cases where taking a close look at the benefits of a tool like a downdraft table makes a lot of sense.

*Cabinetmaker, May 2007
FOG Index 13.3*
From the article below, answer the following questions.

1. What is the definition of “neutral” as referred to in this article?

____________________________________________________________________________________

2. Give a reason for doing a “test run” before applying finish to a lot of cabinets.

____________________________________________________________________________________

**Common Cabinet Stains**

Cabinet stains come in hundreds of “flavours”, and nearly every stain manufacturer has a unique line of colour tones and finish options available.

Normal wood stain comes in just about every colour imaginable, including some that might not readily be identified with natural wood colouring (i.e., blues, greens, etc.; believe it or not, some of these are very appealing).

To create a list of the most common cabinet stains would be hard to do, since there are just too many choices, but looking at some of the cabinet stain product websites and other sources, it appears a large amount of cabinet finish choices hover around “neutral”; that is, natural wood with a clear or slightly colour-toned seal-coat in glossy, matte, satin, or even “glazed” finishes.

Natural wood has a beauty that is meant to be displayed, in my opinion. Modern day finishes help to enhance the beauty by reinforcing and bringing out the highlights and preserving it from weathering or drying out.

Wood stains can cause natural wood to change colouring significantly, especially with multiple applications. It is important to perform a few tests on practice pieces before committing to a large undertaking of staining a lot of cabinets, to ensure the outcome is acceptable.

20. $237.00 = __________
21. 5408 mm = _______

22. You are going to make base cabinets for a job. The cabinets are estimated to be 10½ ft., 5¾ ft. and 4½ ft. Find the total length of the cabinets needed. (Give your answer in feet and inches.)

________________________________

23. What is the final thickness of a 1¼ inch piece of molding if 3/16 th inch is cut off each side? Please state your answer in lowest terms.

___________________________

Calculate the following:

24. \(3(25 ÷ 5) + 2 \times 9 - 12 ÷ 4°\C\)
   \(= _____°\C\)

25. \(42 ÷ (-6) + 8 - 3\ (5)"\)
   \(= ______"\)

26. \(\sqrt{67} " = _______________

27. You bought 2,200 board feet of trim that is supposed to be 75% clear. In reality, how many board feet of clear trim should you have?

______________
28. You charge a customer $9,542.00 for a job. This includes a profit of $1,431.30. What is your rate of profit?

______________

29. The amount of a catalogue quotation for millwork is $1,545.75. The company gives a 3% and a 2% discount. How much will you need to pay for the material?

______________
1. What is the ratio of the width to the length of the piece of stock shown here:

\[ \frac{14 \text{ mm}}{10 \text{ cm}} \]

(Remember to change the units of measurement)

2. If you and three coworkers need 16 days to complete a project, how many days would it take 8 of you to do the same job (under the same conditions)?

3. On the tapes, indicate:
   a) 1½ inch  
   b) \( \frac{3}{8} \) inch  
   c) \( 4 \frac{15}{16} \) inches

d) 6 mm  
e) 4.8 mm

Convert the following:

1 inch = 2.54 cm

4. 22056 mm to m  
5. 12 ft. to inches

6. 8 ft. 6 in. to inches  
7. 6 in. to cm

8. 91.44 mm to ft.  
9. 1 mm to m
10a. Identify each of the following shapes.

b. Match the formula for area to the corresponding shape above:

   a. \( A = \pi r^2 \)  
   b. \( A = L \times W \)  
   c. \( A = L^2 \)  
   d. \( A = \frac{b \times h}{2} \)  
   e. \( A = b \times h \)  
   f. \( A = \frac{(L1 + L2)}{2} \times (h) \)
11. A 4-litre can of urethane will cover 15 square metres. How many litres will you need to coat 650 square feet of cabinets three times?

12. You have a piece of teak 1.5 in. × 5.5 in. × 7 ft. The cost of one board foot is $19.80. What is the price of the board?

$______

\[
1 \text{ m}^2 = 10.764 \text{ ft}^2
\]

\[
T'' \times W' \times L'
\]

T = thickness (inches)
W = width (feet)
L = length (feet)
1. The formula for the volume of a triangular shaped object is:

______________________________

a) What is the formula for length?

______________________________

b) Calculate the volume of the object shown. (not drawn to scale)

______________________________
2a. Label the parts of the circle (tabletop):

a) AB = ____________
b) CD = ____________
c) AC = ____________
d) E-E = ____________

2b. How many square feet of surface area are this tabletop if the width of the table is 48 inches? Round your answer to three places. Use 3.1416 for \( \pi \).

___________________________________

2c. How much edging is required to go around the tabletop? Round your answer to two places. Use 3.1416 for \( \pi \).

______________________

3a. In the right triangle below, what is the formula needed to calculate the size of side C?

\[ a = 6 \text{ in.} \]
\[ b = 8 \text{ in.} \]

______________________

3b. What is the length of side C? __________
4. Calculate the diagonal measurement of the bookcase shown if the width is 2 ft. and the height is 4.5 ft.

5. Match the description to the figure.
   
   a) parallel lines 1.

   b) right angled triangle 2.

   c) diagonal 3.

   d) perpendicular 4.
## Speaking Skills Rating Scale

<table>
<thead>
<tr>

Appendix A - Lesson Plan Template

Appendix B – Essentials Skills for All Apprentices
1. Introduction

The Curriculum Guidebook is designed to provide support and practical advice to instructors who are delivering Essential Skills training, as well as to those who wish to incorporate Essential Skills into technical training. Currently, this Guidebook has been prepared for thirteen trades; however, the template can be adapted for use in any trade.

The thirteen trades include:

- Automotive Service Technician
- Cabinetmaker
- Carpenter
- Cook
- Construction Electrician
- Industrial Electrician
- Machinist
- Metal Fabricator
- Oil Burner Mechanic
- Plumber
- Refrigeration and Air Conditioning Mechanic
- Steamfitter-Pipefitter
- Welder

2. Why Essential Skills?

Essential Skills are needed for work, learning and life. They provide the foundation for learning all other skills and enable people to evolve with their jobs and adapt to workplace change.

Through extensive research, the Government of Canada and other national and international agencies have identified and validated nine essential skills. These skills are used in every occupation and throughout daily life in different ways.

- Reading Text
- Document Use
- Numeracy
- Oral Communication
- Writing
- Computer Use
- Thinking Skills
- Working with Others
- Continuous Learning

The Trade Essentials curriculum materials currently uses six of these Essential Skills:

*Reading, Document Use, Numeracy, Oral Communication, Writing and Computer Use*

For more information on Essential Skills, visit the website at

[www.hrsdc.gc.ca/essentialskills](http://www.hrsdc.gc.ca/essentialskills)
Although the term ‘Essential Skills’ has been around for a number of years, there is growing recognition of the link between Essential Skills and success in the trades. Essential Skills are used in every occupation and more specifically, in every trade, but they are used in different ways and at varying degrees of difficulty.

These skills are not technical skills though they may be taught using materials or examples from a particular trade. Rather, they are the foundational skills that exist in all occupations. The six Essential skills outlined above were used in the creation of materials for the Trade Essentials project.

The Curriculum Frameworks identify the Essential Skills requirements for thirteen trades and provide concrete examples of how these skills are utilized in each trade.

The Essential Skill requirements are based primarily on HRSDC’s Essential Skills profiles [www.hrsdc.gc.ca/essentialskills](http://www.hrsdc.gc.ca/essentialskills) and the National Occupational Analyses. [http://www.red-seal.ca/tr.1d.2n.4adeta.3l@-eng.jsp?tid=230](http://www.red-seal.ca/tr.1d.2n.4adeta.3l@-eng.jsp?tid=230)

They have been reviewed and validated by certified tradespeople and supplemented by additional research gathered from the Trade Essentials project.

### 3. Instructor Requirements

To be effective, curriculum development and delivery must be guided by the principles of adult education. Learners in the Essential Skills programs will have a wide variety of backgrounds, work experience, education and work-related credentials. Many of these learners will be employed in full time positions with additional responsibilities outside of work. It is critical for the instructor to understand the unique requirements of adult learners and be prepared with challenging, relevant and engaging learning activities.

- Instructors must have knowledge and experience in the area of adult education.
- Instructors should have experience in working in a multi-level classroom environment.
- Instructors must be familiar with Essential Skills, how Essential Skills are used in the trades, and with the trade itself. Red Seal certification is encouraged.
- Instructors must be able to provide the link between Essential Skills and the trade and will provide a trade context from their own experience and expertise. In some instances a team approach with both an Essential Skills and a trades instructor may be preferable.
- It is important that those who presently provide technical training also receive training to increase their understanding of Essential Skills.

### 4. Curriculum Development

The curriculum frameworks are derived from an outcomes-based approach to learning focusing on the outcome of the intervention or course of study-what the learner will be able to do or will know at the end of the intervention. They have been developed to
support individual learning needs in each of the six Essential Skills and are the generic Essential Skills Maps for all thirteen trades included in the Trade Essentials project.

The following describes the structure and components of the curriculum frameworks developed for apprentices at the Trade Essentials Centre.

**Learning Category**

A Learning Category (as defined by Trade Essentials) is a general curriculum outcome and is one of the six Essential Skills identified for development in the Trade Essentials project: Reading Text, Document Use, Numeracy, Oral Communication, Computer Use and Writing. It appears in the top band across each of the six frameworks as shown in the example below.

**Note:** Reading Text will be referred to as Technical Reading in all frameworks.

---

**Learning Outcome**

A Learning Outcome is a specific curriculum outcome and describes what a learner should know or be able to do as the result of a course of study. Trade Essentials has identified one Learning Outcome for each Learning Category. The learning outcome statement appears below the Learning Category. For example, the learning outcome in the Trade Essentials Technical Reading Framework is:

*Learners will locate, recall, understand and interpret information in written text*

**Learning Objective**

Learning objectives are the standards or benchmarks that identify what learners will know or will be able to do as the result of the completion of a number of related competencies in a particular “band”. In the example below, the objective for the band is: *TR1 – Use Terminology of the Trade (Burgundy Box).*
Competency

While an objective describes ‘what’ we expect learners to achieve, competencies identify ‘how’ learners can achieve that objective. Competencies are specific activities used to measure whether or not learners have mastered the objective. In Table 1 below, the learner must master competencies 2.1 and 2.2 (taupe boxes) to demonstrate mastery of the objective. Where objectives demonstrate the end result, competencies are a means to that end.

**Competencies provide a framework for selecting instructional materials and techniques and provide a basis for determining when instruction has been successful.**

---

**Table 1**

<table>
<thead>
<tr>
<th>Competency</th>
<th>2.1 Identify strategies to improve understanding and recall of written information</th>
<th>2.2 Implement strategies to improve understanding and recall of written information</th>
</tr>
</thead>
</table>

---

**Curriculum Overview**

The flow chart provides a visual representation of the framework.

One of Six Essential Skills areas as defined in the curriculum frameworks: Numeracy, Reading Text, Document Use, Computer Use, Writing, and Oral Communication.

Describes what a learner should know or be able to do as the result of a course of study. One Learning Outcome describes one Learning Category.

Learning Objectives identify what a learner will know or will be able to do as a result of a learning activity. There will be several Learning Objectives for each Learning Outcome.

Competencies are specific activities that are used to measure whether or not learners have mastered the objectives described in a course of study. They outline what a learner must master in order to achieve the Objective. There are several Competencies associated with each Learning Objective.
5. Curriculum Resources

Three types of resources are identified in the curriculum guidelines: non-contextualized, contextualized, and technical. These resources have been listed throughout the guidelines. It is not intended that instructors use all of the resources outlined but, instead, choose material and deliver its content as it best suits individual learner needs.

**Non-contextualized** resources are not related to any trade or occupation. These resources may be used to review the competencies in a stand-alone manner before transferring the skill to trade-related materials. They can be useful when learners have identified literacy challenges or when basic strategies need to be understood before applying them to higher order learning.

**Contextualized resources** provide Essential Skills applications in the context of a specific trade or occupation and are generally written at a more basic level than technical materials. They are particularly useful when learners have identified Essential Skills gaps but can only identify relevance/motivation to the task if it is related to their specific trade.

**Technical resources** are trades training materials from which Essential Skills can be extracted. These resources are written at a higher reading level than non-contextualized and contextualized resources and can often be found in block release training and college trade programs. Generally, learners who would benefit from these materials have few Essential Skills gaps in their learning.

6. Preparation and Delivery

Instructors will be provided with a complete copy of the Essential Skills Frameworks associated with the trades/courses for which they are responsible. Instructors will use essential skills assessment information to build a learning session for one client or a group of clients.

The instructor will be required to prepare lesson plans as a tool to organize and plan the delivery of training. A lesson plan template in included in Appendix A. A brief description of each section of the lesson plan is included in the attached template to serve as a guide. The instructor may add additional notes and documents as required. Completed lesson plans should be kept on file to provide continuity in subsequent sessions.

It is important to note that, even though objectives and competencies progress from least to most difficult, instruction need not move in a linear fashion. In recognition of their prior knowledge, learners may begin their study at any objective in the curriculum frameworks, may not require instruction in all of the competencies in each band, and/or may simultaneously complete competencies in all six Essential Skill curriculum frameworks.
Learners who have extensive Essential Skills gaps may require that the curriculum framework be followed using a linear approach beginning with the least complex objectives.

The curriculum frameworks are applicable to all thirteen trades identified for the project. For instance, though "Using Documents" is identified as important to both cooks and carpenters; however, the way documents are used in the trade is what makes them relevant to that specific trade.

The exception is "Numeracy" where not all objectives listed are required in all thirteen trades. For example, a cook may not be required to master all of the learning objectives outlined in the framework whereas a machinist requires mastery of all. Appendix B includes a checklist of the skills required for each particular trade.

The guidelines define objectives and competencies and identify matching resources. The instructor can then use these resources to develop lesson plans that best suit the needs of their particular audience.

Though frameworks are written in academic language (at an academic level), the intent is that the objectives and competencies be taught using trade specific examples. Curriculum frameworks may be delivered one-on-one or in a group learning environment.

6.1 Approaches to Delivery

The delivery approach can be stand alone or cross curricular, depending on the needs of the client or client group.

A stand alone approach involves using any one of the curriculum frameworks in its entirety as a stand alone course. For example, carpenters who have been away from the classroom for a long time may benefit from a review of the complete Numeracy framework and focus solely on that Essential Skill.

Others, including those who have achieved journey person status, may require a Computer Course or a course in Oral Communication to improve their skills in dealing with customers or in mentoring new apprentices.

It is assumed that in many classroom situations instructors will use a cross-curricular approach to develop a number of skills at the same time.

All students will benefit from instruction in how to understand and retain information from trade-related materials. For example, using the codebook for locating information can address both technical reading and document use. An activity which requires the learner to complete an invoice may provide the opportunity to incorporate technical reading, writing, document use and numeracy in one exercise.

It is intended that Essential Skills can be embedded in the curriculum wherever possible and that instruction in many of the skill areas will not be time-tabled as such. It has
been proven that a learning environment that provides opportunity for discussion and interaction among learners will improve comprehension and long-term memory.

7. Measuring Learning: Instructor’s Role in Evaluation

There are a number of informal methods that could be used periodically by the instructor to ensure progress. It is important to note that measurement is not based on a “Pass-Fail”; it is understood that the learner sees the value in improving their skill level and will continue to develop their skills until they are comfortable and confident in performing the required tasks.

Informal Evaluation Methods:

- Provide opportunities and simple recording forms for the learner to assess their progress.
- Review individual assessments on a regular basis against the curricula framework.
- Pay particular attention to those identified as potential “early leavers” to ensure they are moving forward as anticipated.
- Pay attention to those who experience unanticipated difficulties in the group environment.
- Document observations of performance in class.
- Develop a rubrics for a particular objective that can be shared with students.

Formal Evaluation:

- Where a more formal evaluation approach is desired, the instructors or learners could design and complete a structured checklist (see sample checklist in Appendices).
  Mastery of skills at the highest level using the application to the trade would demonstrate that the learner meets trade requirements.

8. Intervention Timeframe

The Trade Essentials interventions have been developed for individualized learning; therefore, no set time period has been determined for the delivery of the material. Learners’ prior knowledge and time necessary to learn or relearn skills should determine the length of time spent in the intervention. For that purpose, a continuous exit policy should be implemented into all programs. There may be a mixture of “early leavers” (those identified as having few or isolated essential skills gaps), with those who have broader range of needs.
## Appendix A

### Trade Essentials

#### Lesson Plan Template

<table>
<thead>
<tr>
<th>Course Title:</th>
<th>Dates:</th>

</thead>
<tbody>
<tr>
<td>Instructor:</td>
<td>Location:</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Session Topic(s):</th>
<th>Duration:</th>
</tr>
</thead>
</table>

### Session Description:

Describe what you plan to accomplish during the session or group of sessions. Why is this learning important? What is the context for the learning?

### Learning Outcomes, Objectives, and Competencies:

List or attach the specific or related Learning Outcomes, Objectives, and Competency statements (from the framework) here.

### Assessment and Evaluation Strategies:

Outline or attach learner evaluation strategies that align with specific Learning Outcome, Objectives, and Competencies. Pre- or post-tests; in-class exercises; individual skill inventories; etc.
### Teaching Points and Organization:

<table>
<thead>
<tr>
<th>Time</th>
<th>Content and Delivery Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>7:00-7:15</td>
<td>Use bridge-in activity (describe activity) to gain student interest and prepare them to learn</td>
</tr>
<tr>
<td>7:15-8:15</td>
<td>Using carpentry estimating handout, have students work on assignment in groups of 2 then debrief assignment</td>
</tr>
<tr>
<td>8:00-8:15</td>
<td>Break</td>
</tr>
<tr>
<td>8:15-8:20</td>
<td>Energizer activity (describe activity) to refocus students on learning</td>
</tr>
</tbody>
</table>

### Resources and Materials Required:
List resources and materials you will use during this session. If applicable, attach copies, descriptions or links to items such as handouts, assignments, demonstration equipment, websites, readings, activities or other specific resources for instructor and/or student use.

### Accommodations:
Describe any teaching/learning accommodations that may be implemented in this session to support learner diversity.

### Reflective Notes:
How did the session go? What worked well and what work not so well? Outline any ideas for improvement that can be made for the next session.

Introduction

Success in technical training and in the trade requires that apprentices understand, connect with and recall important information. Knowing the language of the trade and developing strategies to quickly locate specific information in reading materials such as code books, manuals and texts not only increases reader comprehension but also productivity on the job.

Just as it is important to think about reading habits, it is important for apprentices to think about and develop strategies for exam preparation. Whether writing tests that are required during technical training or getting ready to write the Red Seal certification exam, adequate test preparation is essential. As multiple-choice testing is the most common form of assessment for certification, knowing how multiple-choice questions are constructed and applying strategies for responding can significantly improve test scores.

Technical Reading in the Cabinetmaking Trade

Cabinetmakers use technical reading on a daily basis to complete job tasks. The complexity of these reading tasks, according to Human Resources and Skills Development Canada’s Essential Skills Profile (http://srv108.services.gc.ca/), ranges from reading short texts to locate a single piece of information (e.g., read instructions for hardware installation) to choosing and integrating information from various sources or from several parts of a single text (e.g., integrating information from reference books to construct products).

Following written instructions, interpreting specifications, and understanding the structure of and referring to codes are basic requirements for all Cabinetmakers. They read manufacturers’ material such as brochures and catalogues to help in the design of cabinet casework and integrate information from several sources to verify compliance with regulations and codes.

Because Cabinetmakers work with other professionals, understanding and expanding on the trade vocabulary is an important part of the communication process.

Introduction to the Curriculum Guide

Success in technical training and performance on the job requires that apprentices have strong Essential Skills. Although all Essential Skills contribute to success, this guide is intended to help apprentices in the cabinetmaking trade develop the
reading strategies necessary to locate, understand, interpret and recall information presented in a variety of text formats common to the trade.

It is assumed that the instruction for the Technical Reading course will not be time-tabled as such, but instructors will use a cross-curricular approach to incorporate reading strategies using the materials of the trade.

The following guide outlines a list of recommended resources (see Appendix A) for each objective in the Technical Reading curriculum framework and, where possible, includes online website materials that complement these resources. Three formats are provided to allow learners the opportunity to review competencies in a way that best suits their needs. These resources are categorized as follows:

▪ **Non-contextualized** - Curriculum resources that are not related to any trade or occupation. These resources may be used to review the competencies in a stand-alone manner before transferring the skill to trade-related materials.

▪ **Contextualized** - Curriculum resources that provide Essential Skills applications in the context of a specific trade or occupation.

▪ **Technical** – Trade-training materials from which Essential Skills are extracted. For the purpose of the Trade Essentials project, *Individual Learning Modules* from Alberta Advanced Education and *Modern Cabinetmaking* by William D. Umsttsssd and Charles W. Davis were used as the primary technical resources.

*Note: Though only some modules are outlined as resources for specific objectives, all Individual Learning Modules can be used for the instruction of Essential Skills.*

The list of resources has been designed to act only as a guide and may, therefore, need to be adapted to meet the needs of individuals or groups. It is the role of you, the instructor, to choose materials and deliver its content as it best suits individual learner needs. A variety of materials are listed under each set of competencies for this purpose.

The following websites contain both cabinetmaking-related and generic content which may be used as an additional reading forum.

**Cabinetmaking-related Online Websites:**

▪ [www.diydata.com/diyindex/topicindex.php](http://www.diydata.com/diyindex/topicindex.php) (Cabinetmaking information on various topics)

TR1 Use Terminology of the Trade

Upon completion of this objective, learners will be able to:

1.1 identify strategies to organize and remember new terminology
   ▪ use context clues to find the meaning of new terms
   ▪ use word parts to create meaning
   ▪ use trades glossary to find meaning of technical terms
   ▪ use standard dictionary to find meaning of non-technical terms

1.2 implement strategies to organize and remember new terminology
   ▪ define terms
   ▪ use terminology in context

Suggested Strategies and Activities:

- Identify and define terms unique to the trade
- Highlight unfamiliar terms in trade-related reading
- Choose appropriate strategies to find meaning of unfamiliar terms
- Demonstrate understanding of new terms by using in sentences, providing examples or providing illustrations
- Create a personal dictionary
- Use graphic organizers to remember terms of the trade

Non-contextualized Resources:

- Shape Up Your Reading
- Cross Curricular Reading Tools (Vocabulary Study)

Contextualized Resources:

- EARAT (Communications for Carpenters: Skill #2)
- Navigating Texts and Documents in Technical Training

Technical Resources:

- Carpentry and Building Construction
- Modern Cabinetmaking
- Building Trades Dictionary
- Glossary of Housing Terms
- Cabinetmaking Procedures for the Small Shop
- National Occupational Analysis (NOA) for Cabinetmaker
- All Individual Learning Modules, especially:
  ▪ Individual Learning Module 360104c - Cabinetmaker-Table, Panel and Radial Arm Saws - Machines and Equipment - First Period
  ▪ Individual Learning Module 360304d – Cabinetmaker - Furniture Design and Architectural Terms - Principles of Design and Layout with Emphasis on Machining and Assembly Practices - Third Period
- Individual Learning Module 360306a-Cabinetmaker - Stair Design and Codes – Stairs - Third Period
- Individual Learning Module 360408a-Cabinetmaker - Two-Point Perspective - Shop Drawing - Fourth Period

**Online Resources:**

**Online Glossaries:**

TR2 Use Strategies to Improve Understanding and Recall

Upon completion of this learning objective, learners will be able to:

2.1 identify strategies to improve understanding and recall of written information
   ▪ use prior knowledge to make sense of new information
   ▪ use SQ3R
   ▪ use KWL
   ▪ use note-taking strategies
2.2 implement strategies to improve understanding and recall of written information

Suggested Strategies and Activities:

- Identify individual learning style
- Incorporate learning strategies for individual learning style for study and class participation
- Model strategies and encourage learners to use them
- Explain the steps to the SQ3R strategy
- Explain the steps to the KWL strategy
- Create and use charts for SQ3R and KWL
- Use KWL in group settings to introduce new concepts
- Apply techniques for note-taking and marking text
- Assess and modify personal study habits/environment to incorporate new strategies

Non-contextualized Resources:

- Shape Up Your Reading
- Cross Curricular Reading Tools

Contextualized Resources:

- Navigating Texts and Documents in Technical Training

Technical Resources:

- All Individual Learning Modules
- Modern Cabinetmaking
- Cabinetmaking Procedures for the Small Shop
Online Resources:

- [http://www.bucks.edu/~specpop/Lrnprfil.htm](http://www.bucks.edu/~specpop/Lrnprfil.htm) (Learning Styles and Study Skills)

- [http://www.learning-styles-online.com/](http://www.learning-styles-online.com/) (Learning Styles)
- [http://www.support4learning.org.uk/education/learning_styles.cfm](http://www.support4learning.org.uk/education/learning_styles.cfm) (Learning Styles)
- [http://www.studygs.net/](http://www.studygs.net/) (Reading and Study Strategies)
TR3  Read to Perform Job Tasks

Upon completion of this objective, learners will be able to:

3.1 identify purpose of reading information to perform job tasks
3.2 locate specific information
   ▪ scan to locate specific information
   ▪ locate information using organizational features of text
3.3 skim for overall meaning
3.4 read to understand and learn
3.5 read to critique
3.6 read to evaluate

Suggested Strategies and Activities:

- Use organizational features to predict content and relevance of text
- Locate information using key words
- Scan for information in trade-related material (e.g., texts, memos, newsletters, safety information, equipment manuals, codes and regulations)
- Practice skimming to get the main idea in reading material of the trade (e.g., texts, memos, newsletters, safety information, equipment manuals, codes, specifications and regulations)
- Use Table of Contents, Indices, Appendices, Headings and Sub-headings to locate information in material of the trade (e.g., texts, collective agreements, manuals, codes, specifications and regulations)
- Introduce structure and layout of the National Building Code
- Use numbering system to identify exact location of information in the National Building Code
- Read selections of text and provide a verbal or written summary
- Read specification sheets to determine project requirements
- Read installation manuals to follow procedures
- Compare the advantages and disadvantages of various tools or materials for a particular situation
- Read Occupational Health and Safety regulations to determine safe work practices
- Read and interpret building codes, regulations and standards to comply with national, provincial and municipal regulations
Non-contextualized Resources:

- Shape Up Your Reading
- Navigating Texts and Documents in Technical Training
- Cross Curricular Reading Tools
- Study Smarter, Not Harder

Contextualized Resources:

- EARAT (Communications for Carpenters: Skill #1, 3, 4, 5, 7, 9-12)
- A Toolbox of Reading Activities Apprenticeship Branch of Manitoba Competitiveness Training and Trade (Interpreting Building Specifications)
- Applied Communication Skills for the Construction Trades
- Navigating Texts and Documents in Technical Training

Technical Resources:

- Modern Cabinetmaking
- Carpentry and Building Construction, 6th Edition
- National Housing Code of Canada 1998 and Illustrated Guide
- Cabinetmaking Procedures for the Small Shop
- All Individual Learning Modules, especially:
  - Individual Learning Module 360210b – Cabinetmaker - Reading Specifications and Building Code - Blueprint Interpretation - Second Period
  - Individual Learning Module 360311f – Cabinetmaker - Winder Stair Calculations-Math assignments Related to Course Content in Theory, Shop and Shop Drawing - Third Period
  - Individual Learning Module 360306a – Cabinetmaker - Stair Design and Codes – Stairs - Third Period
  - Individual Learning Module 360302e – Cabinetmaker -Thermal and Acoustic Insulation – Materials - Third Period

Online Resources:

- http://www.keyskillssupport.net/teacandlearresoa/ (Learning Resources - see Construction Sector)
- http://www.42explore.com/skim.htm (Skimming and Scanning)
- http://www.edu.gov.on.ca/eng/studentsuccess/thinkliteracy/files/Reading.pdf (Strategies for Reading Graphical Text)
- www.open.ac.uk/skillsforstudy/active-reading.php (Active Reading)
TR4  Improve Examination Performance

Upon completion of this objective, learners will be able to:

4.1 identify barriers to successful examination performance
4.2 identify strategies to improve examination performance
   ▪ identify ways to prepare for exams
   ▪ identify test-taking strategies
   ▪ identify strategies to reduce test anxiety
4.3 implement strategies to improve examination performance

Note: Learners preparing for the Interprovincial Red Seal exam should review the National Occupational Analysis for Cabinetmakers.

Suggested Strategies and Activities:

▪ Analyze past tests
▪ Provide opportunity to complete practice questions
▪ Provide information on testing locations and procedures for your province
▪ Review the NOA for cabinetmakers
▪ Discuss test-taking strategies
▪ Discuss strategies to reduce test anxiety
▪ Discuss steps in test preparation

Non-contextualized Resources:

▪ Shape Up Your Reading
▪ Study Smarter, Not Harder
▪ National Electrical Trade Council (NETCO) Instructor’s Guide: Test-taking Strategies for Interprovincial Red Seal Exams (Generic Version)
▪ Tools for the Trade: A Guide to Success in Apprenticeship

Technical Resources:

▪ National Occupational Analysis for Cabinetmaker
▪ All Individual Learning Modules (Self-tests)
▪ Trades Exam Bank (online)
▪ Modern Cabinetmaking
▪ Cabinetmaking Procedures for the Small Shop
Online Resources:

Learners will use strategies for locating, retrieving, interpreting and entering information in/from documents and for creating trade documents

Introduction

Document Use (DU) tasks involve the process of locating, organizing and using information in different visual displays that include words, numbers and diagrams. These visual materials efficiently summarize large amounts of information in a small amount of space and are widely used in trade occupations.

Apprentices must be proficient document users if they are to be successful in technical training and in job performance. This guide has been developed to provide apprentices with strategies to use trade documents quickly, efficiently and accurately. Learners will locate, interpret and evaluate information in documents and will create documents common to their trade. Understanding document structure and the strategies for using them will lead to more efficient information processing. For the purpose of the Trade Essentials project, documents have been categorized and defined as follows:

- **List** - A document that records items in a row
- **Table** - A document that arranges information in rows and columns
- **Form** - A document which contains blanks for the insertion of pre-specified information
- **Chart** - A document that is used primarily to make large quantities of data easier to understand; illustrates the relationship between different parts of the data, and commonly presents information as plots with reference to an axis. Charts are generally graphical in nature and contain very little text. Examples of charts include pie chart, flow chart, bar graph, line graph, histogram and pictogram
- **Graphic Document** - A document which portrays information as an imitation of the real world. Examples of graphic documents include pictures, diagrams, drawings, blueprints, schematics, maps, symbols, signs and icons

The following guide outlines a list of recommended resources (see Appendix A) for each objective in the Document Use curriculum framework and, where possible, includes online website materials that complement these resources. Three formats are provided to allow learners the opportunity to review competencies in a way that best suits their needs. These resources are categorized as follows:

- **Non-contextualized** - Curriculum resources that are not related to any trade or occupation. These resources may be used to review the competencies in a stand-alone manner before transferring the skill to trade-related materials.
Contextualized - Curriculum resources that provide Essential Skills applications in the context of a specific trade or occupation.

Technical – Trade-training materials from which Essential Skills are extracted. For the purpose of the Trade Essentials project, Individual Learning Modules from Alberta Advanced Education were used as the primary technical resource.

Note: Though only some modules are outlined as resources for specific objectives, all Individual Learning Modules can be used for the instruction of Essential Skills.

The list of resources has been designed to act only as a guide and may, therefore, need to be adapted to meet the needs of individuals or groups. It is the role of you, the instructor, to choose materials and deliver its content as it best suits individual learner needs. A variety of materials are listed under each set of competencies for this purpose.

Document Use in the Cabinetmaking Trade

Cabinetmakers use documents on a daily basis to complete job tasks. The complexity of these tasks, according to Human Resources and Skills Development Canada’s Essential Skills Profile (http://srv108.services.gc.ca/), ranges from using very simple, brief text combined with uncomplicated structure (e.g., complete checklists relating to safety precautions) to using somewhat complex documents with multiple pieces of information organized with sub-headings or subparts (e.g., refer to assembly or shop drawings and blueprints to check details).

Cabinetmakers refer to sketches, blueprints and/or photographs when designing products and when checking project details. They create sketches, draw, plan elevation and sectional views of shop drawings and draw enlarged construction details.

Cabinetmakers require advanced blueprint reading skills in order to navigate complex plans to find information, work with other trades and meet customer requirements. They must be skilled at finding information in blueprints and identifying absent information.

Cabinetmakers refer to WHMIS (Workplace Hazardous Materials Information System) symbols and data sheets such as MSDS when preparing finishing materials and determine proportions for mixing products by referring to product labels.

For background information on Document Use and how documents are used in the Cabinetmaking trade, visit these sites:

DU1  Use Lists

Upon completion of this objective, learners will be able to:

1.1 define lists
1.2 identify purpose
1.3 locate information in lists
1.4 interpret information in lists
1.5 create lists
1.6 evaluate lists for effectiveness

Suggested Strategies and Activities:

- Identify presence and uses of lists in documents of the trade
- Find examples and extract information from the four types of lists (simple, combined, intersected and nested)
- Create lists to organize and compare information by category (i.e., tools, materials and special equipment for each installation)
- Create material lists from specification sheets
- Differentiate between lists and tables
- Analyze lists and determine degree of difficulty (i.e., simple or complex)
- Examine structure and components of a variety of lists
- Encourage learners to share their knowledge and experiences

Non-contextualized Resources:

- The Language of Documents - A Guide to Information Display in the Workplace
- Field Safety, Volume One
- Document Use Refresher for Apprentices (Module 2)

Contextualized Resources:

- Carpenter-related Essential Skills Resource Binder
- Applied Communication Skills for the Construction Trades
- Cabinetmaking Procedures for the Small Shop
- Practical Shop Math
- IPT’s Safety First Handbook (Book One)
Technical Resources:

- Modern Cabinetmaking
- Individual Learning Module 360104a – Cabinetmaker - Portable Power Tools – Machines and Equipment - First Period
- Individual Learning Module 360105aB-Cabinetmaker - Trade Safety - Part B – Safety - First Period
- Individual Learning Module 360405a – Cabinetmaker - Installation of Millwork - Industry Practices - Fourth Period
DU2 Use Tables

Upon completion of this objective, learners will be able to:

2.1 define tables
2.2 identify purpose
2.3 locate information in tables
2.4 interpret information in tables
2.5 create tables
2.6 evaluate tables for effectiveness

Suggested Strategies and Activities:

- Brainstorm to identify the use of tables in the trade
- Gather samples of tables from job sites
- Create tables to sort and separate materials, supplies and equipment
- Analyze tables and determine degree of difficulty (i.e., simple or complex)
- Examine structure and components of a variety of tables
- Encourage learners to share their knowledge and experiences

Non-contextualized Resources:

- Field Safety, Volume One
- Workplace Communications - The Basics, 3rd Edition (Chapter 3)

Contextualized Resources:

- Applied Communication Skills for the Construction Trades
- Carpenter-related Essential Skills Resource Binder
- Practical Shop Math
- IPT’s Safety First Handbook (Book One)

Technical Resources:

- Modern Cabinetmaking
- Individual Learning Module 360214d - Cabinetmaker - Trade Math - Level II - Practical Trade Calculations - Second Period
- Individual Learning Module 360102f - Cabinetmaker - Fasteners and Abrasives – Materials - First Period
- Individual Learning Module 360107e - Cabinetmaker - Reading Shop Drawings and Cutting Lists – Introduction to Shop Drawing - First Period
- Individual Learning Module 360214aB-Cabinetmaker - Material Quantity Calculations - Part B - Practical Trade Calculations - Second Period
- Individual Learning Module 360214c-Cabinetmaker - Rule of Thumb Costing - Trade Math - Second Period
- Individual Learning Module 360308a – Cabinetmaker - Blueprint Reading Principles - Blueprints for a Commercial Type Building - Third Period
- Individual Learning Module 360308b - Cabinetmaker - Basic Blueprint Reading 2 Drawing Groups and Views - Part A - Blueprints for a Commercial Type Building - Third Period
- Individual Learning Module 360311b-Cabinetmaker - Quantity Takeoffs and Layout - Assignment Related to Course Content in Theory, Shop, and Shop Drawing - Third Period
- Individual Learning Module 360311d-Cabinetmaker – Straight - Flight Stair Calculations - Math Assignments Related to Course Content in Theory, Shop, and Shop Drawing - Third Period
- Individual Learning Module 360311e – Cabinetmaker – Multiple-Flight Stair Calculations - Math Assignments Related to Course Content in Theory, Shop, and Shop Drawing - Third Period
DU3 Use Forms

Upon completion of this objective, learners will be able to:

3.1 define forms
3.2 identify purpose
3.3 locate information in forms
3.4 interpret information in forms
3.5 enter information into forms
3.6 create forms
3.7 evaluate forms for effectiveness

Suggested Strategies and Activities:

- Define entry forms as documents which both share information and require input of information
- Identify features common to workplace forms
- Identify audience for workplace forms
- Interpret vocabulary of workplace forms
- Extract information from forms common to the trade (e.g., accident/incident reports, expense forms, daily time sheets, daily logs, invoices, application forms, purchase orders and material take-off sheets)
- Use title of form to predict purpose and kinds of information requested
- Distinguish between primary and secondary information
- Enter information into forms common to the trade (e.g., accident/incident reports, expense forms, daily time sheets, daily logs, invoices, application forms, purchase orders and material take-off sheets)
- Analyze forms and determine degree of difficulty (i.e., simple or complex)
- Examine structure and components of a variety of forms
- Encourage learners to share their knowledge and experiences

Non-contextualized Resources:

- The Language of Documents - A Guide to Information Display in the Workplace
- Document Use Refresher for Apprentices (Module 6)
- Writing at Work (Module 2 - Entry Forms)

Contextualized Resources:

- A Toolbox of Reading Activities - Supplementary Teaching Resources, Apprenticeship Branch of Manitoba Competitiveness Training and Trade
- Tools for Success: Soft Skills for the Construction Industry
- Carpenter-related Essential Skills Resource Binder (Module 1)
Technical Resources:

- Modern Cabinetmaking
- Individual Learning Module 360211c – Cabinetmaker - Material and Cutting List and Procedural Plan - Development of Production Drawings - Second Period
- Individual Learning Module 360214aB – Cabinetmaker - Material Quantity Calculations - Part B - Practical Trade Calculations - Second Period
- Individual Learning Module 360404a - Cabinetmaker - Job Roles and Responsibilities - Industry Practices - Fourth Period
- Individual Learning Module 360302a – Cabinetmaker - Hardwood Lumber Grading Systems – Materials - Third Period

Online Resources:

- [http://www.cabinetsbygraber.com/default.aspx](http://www.cabinetsbygraber.com/default.aspx) (Graber Cabinets)
- [http://www.abcforms.com/allstates.html](http://www.abcforms.com/allstates.html) (Examples of Construction Forms)
- [http://books.google.ca/books?id=DBhILqGvCakC&pg=PA36&lpg=PA36&dq=how+to+complete+construction+invoices&source=web&ots=RLEjAHWmQ9&sig=UTLvWpFGyC5mWYPWNnL0lWY1CU&hl=en&sa=X&oi=book_result&resnum=1&ct=result](http://books.google.ca/books?id=DBhILqGvCakC&pg=PA36&lpg=PA36&dq=how+to+complete+construction+invoices&source=web&ots=RLEjAHWmQ9&sig=UTLvWpFGyC5mWYPWNnL0lWY1CU&hl=en&sa=X&oi=book_result&resnum=1&ct=result) (Examples of forms)
DU4 Use Charts

Upon completion of this objective, learners will be able to:

4.1 define charts
4.2 identify purpose
4.3 locate information in charts
4.4 interpret information in charts
4.5 create charts
4.6 evaluate charts for effectiveness

Suggested Strategies and Activities:

- Identify the presence and use of charts in the trade
- Identify the basic types (pie chart, bar graph and line graph, etc.) and in what circumstance each may be used
- Discuss the use of charts in a variety of trade-related and safety workplace documents
- Review workplace charts common to the trade
- Analyze charts and determine degree of difficulty (i.e., simple or complex)
- Examine structure and components of a variety of charts
- Encourage learners to share their knowledge and experiences
- Discuss charts as a useful way to compare numerical data
- Define charts as visual organizers of data

Non-Contextualized Resources:

- The Language of Documents - A Guide to Information Display in the Workplace
- Field Safety - Volume One
- Document Use Refresher for Apprentices (Modules 4 & 5)
- Workplace Communications - The Basics, 3rd Edition (Chapter 3)
- Pre-Apprentice Training - A Test Preparation Manual for the Skilled Trades

Technical Resources:

- Individual Learning Module 360211c – Cabinetmaker - Material and Cutting List and Procedural Plan - Development of Production Drawings - Second Period
- Individual Learning Module 360404b – Cabinetmaker - Basic Contract Law - Industry Practices - Fourth Period
- Individual Learning Module 360404e – Cabinetmaker - Production Scheduling - Industry Practices - Fourth Period
Online Resources:

- [http://www42.statcan.ca/smr02/smr02_022_e.htm](http://www42.statcan.ca/smr02/smr02_022_e.htm) (Statistics Canada)
- [http://www.gdsourcing.ca/works/Construct.htm](http://www.gdsourcing.ca/works/Construct.htm) (Canadian Construction Association)
DU5 Use Graphic Documents

Upon completion of this objective, learners will be able to:

5.1 define graphic documents
5.2 identify purpose
5.3 locate information in graphic documents
5.4 interpret information in graphic documents
5.5 create graphic documents
5.6 evaluate graphic documents for effectiveness

Suggested Strategies and Activities:

- Identify symbols commonly used in the trade including WHMIS
- Interpret signs for safety information
- Interpret product or packaging labels
- Recognize lines used on drawings
- Recognize significance of symbols
- Take measurements from drawings
- Distinguish between orthographic, isometric and oblique drawings
- Use diagrams to assemble pre-fabricated components
- Construct drawings (e.g., site, architectural, system)
- Use geometry tools to create common angles and shapes
- Make sketches to communicate ideas for changes in existing plans
- Practice drawing to scale using metric and imperial systems
- Analyze graphic documents and determine degree of difficulty (i.e., simple or complex)
- Examine structure and components of a variety of graphic documents
- Encourage learners to share their knowledge and experiences
- Display documents common to the cabinetmaker trade (e.g., signs, labels, codes, schematics, collective agreements, safety information, maps, product catalogues, installation manuals, scale drawings and blueprints)

Non-contextualized Resources:

- The Language of Documents - A Guide to Information Display in the Workplace
- Field Safety, Volume One
- Document Use Refresher for Apprentices (Modules 1 & 3)
- Carpenter-related Essential Skills Resource Binder
- Workplace Communications - The Basics, 3rd Edition (Chapter 3)
- Pre-Apprentice Training - A Test Preparation Manual for the Skilled Trades
Contextualized Resources:

- Evaluating Academic Readiness for Apprenticeship Training – Carpenter - Communications Skill #6 (Interpretation of diagrams)
- Applied Communication Skills for the Construction Trades
- Blueprint Fundamentals: Interpreting Symbols and Specs (CD-ROM)
- Cabinetmaking Procedures for the Small Shop
- Practical Shop Math
- IPT’s Safety First Handbook (Book One)

Technical Resources:

- Modern Cabinetmaking
- Print Reading for Construction - Residential and Commercial
- All Individual Learning Modules, especially:
  - Individual Learning Module 360107b - Cabinetmaker - Orthographic Drawings - Shop Drawing - First Period
  - Individual Learning Module 360107c – Cabinetmaker - Basic Drawing Standards- Shop Drawing - First Period
  - Individual Learning Module 360107d - Cabinetmaker - Pictorial Drawing and Sketching - Shop Drawing - First Period
  - Individual Learning Module 360107a - Cabinetmaker- Drafting Basics - Shop Drawing - First Period
  - Individual Learning Module 360107e - Cabinetmaker- Reading Shop Drawings and Cutting Lists – Introduction to Shop Drawing - First Period
  - Individual Learning Module 360214d - Cabinetmaker- Trade Math - Level II- Practical Trade Calculations - Second Period
  - Individual Learning Module 360209a – Cabinetmaker - Drawing Standards Review - Review Shop Drawing - Second Period
  - Individual Learning Module 360209bA – Cabinetmaker - Residential Blueprint Reading - Part A - Review Shop Drawing - Second Period
  - Individual Learning Module 360209bB - Cabinetmaker - Residential Blueprint Reading - Part B- Review Shop Drawing - Second Period
  - Individual Learning Module 360210a – Cabinetmaker - Commercial Blueprint Reading - Blueprint Interpretation - Second Period
  - Individual Learning Module 360211a – Cabinetmaker - Freehand Sketches- Development of Production Drawings - Second Period
  - Individual Learning Module 360304b – Cabinetmaker - Ergonomics- Principles of Design and Layout - Third Period
  - Individual Learning Module 360306a – Cabinetmaker - Stair Design and Codes-Stairs -Third Period
Individual Learning Module 360308a – Cabinetmaker - Blueprint Reading Principles - Blueprints for a Commercial Type Building - Third Period

Individual Learning Module 360308b – Cabinetmaker - Basic Blueprint Reading 2 Drawing Groups and Views - Part A - Blueprints for a Commercial Type Building - Third Period

Individual Learning Module 360308c – Cabinetmaker - Basic Blueprint Reading 2 Drawing Groups and Views - Part B - Blueprints for a Commercial Type Building - Third Period

Individual Learning Module 360308d – Cabinetmaker - Basic Blueprint Reading 2 Drawing Groups and Views - Part C - Blueprints for a Commercial Type Building - Third Period

Individual Learning Module 360308e – Cabinetmaker - Interpret Advanced Commercial Blueprints - Blueprint Reading - Third Period

Individual Learning Module 360309a – Cabinetmaker - Create Shop Drawings from Commercial Blueprints - Drawings - Third Period

Individual Learning Module 360407a - Cabinetmaker-Commercial Prints with Complex Architectural Elements - A Comprehensive Review of Blueprints and Drawings Typically Encountered in the Cabinetmaker Trade - Fourth Period

Individual Learning Module 360407b – Cabinetmaker - Print Conflicts and Resolution - A Comprehensive Review of Blueprints and Drawings Typically Encountered in the Cabinetmaker Trade - Fourth Period

Individual Learning Module 360408b - Cabinetmaker-Two-Point Perspective - Shop Drawing - Fourth Period

The following checklist represents an overview of the Essential Skills necessary for Cabinetmaker apprentices and identifies areas requiring review.

Learner Name: ___________________________
Instructor Name: ___________________________
Inventory Date: ___________________________
Post-inventory Date: ___________________________

|---------------------------|----------------------------------------------------------|--------------------------------------------------------|------------------------------------------|--------------------------------------------------|---------------------------------------------------|

**OBJECTIVE 1: USE CALCULATORS**

1.1 Identify the risks and benefits involved in using calculators in the trade
1.2 Describe how calculators are used in the trade
1.3 Determine the best calculator for the trade
1.4 Use knowledge of calculators to solve problems

**OBJECTIVE 2: USE POSITIVE AND NEGATIVE NUMBERS**

- (Positive Numbers Only)
  2.1 Read positive and negative numbers
  2.2 Write positive and negative numbers
  2.3 Round positive and negative numbers
  2.4 Estimate positive and negative numbers
  2.5 Order positive and negative numbers
  2.6 Compare positive and negative numbers
  2.7 Add positive and negative numbers
  2.8 Subtract positive and negative numbers
  2.9 Multiply positive and negative numbers
  2.10 Divide positive and negative numbers
  2.11 Use knowledge of positive and negative numbers to solve problems

**OBJECTIVE 3: USE ORDER OF OPERATIONS**

3.1 Identify the necessary steps in performing order of operations
3.2 Calculate answers using correct order of operations
3.3 Use order of operations to solve problems
## Objective 4: Use Fractions

<table>
<thead>
<tr>
<th>Task</th>

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### PRINCIPLES OF MATHEMATICS

#### OBJECTIVE 15: USE ANGLES
- 15.1 Identify various types of angles common to the trade
- 15.2 Compare angles common to the trade
- 15.3 Measure angles
- 15.4 Use knowledge of angles to solve problems

#### OBJECTIVE 16: USE GEOMETRIC SHAPES
- 16.1 Identify geometric shapes
- 16.2 Use knowledge of geometric shapes to solve problems

#### OBJECTIVE 17: USE TRIGONOMETRY
- 17.1 Identify the value of trigonometry in the trade
- 17.2 Set up trigonometric ratios
- 17.3 Use trigonometric functions to solve problems

Learners will understand, interpret and manipulate mathematical concepts in order to solve problems and complete tasks.

Introduction

The Principles of Mathematics (PM) is an introduction to the foundational skills necessary for successful technical training and effective job task completion. The intent of the course is twofold: to review and to further develop the concepts and strategies necessary for solving problems and completing tasks in the Cabinetmaker trade.

The following guide outlines a list of recommended resources (see Appendix A) for each objective in the Mathematics curriculum framework and, where possible, includes online website materials that complement these resources. Three formats are provided to allow learners the opportunity to review competencies in a way that best suit their needs. These resources are categorized as follows:

- **Non-contextualized** - Curriculum resources that are not related to any trade or occupation. These resources may be used to review the competencies in a stand-alone manner before transferring the skill to trade-related materials.

- **Contextualized** - Curriculum resources that provide Essential Skills applications in the context of a specific trade or occupation.

- **Technical** – Trade-training materials from which Essential Skills are extracted. For the purpose of the Trade Essentials project, *Individual Learning Modules* from Alberta Advanced Education and *Modern Cabinet Making* by William D. Umstattd and Charles W. Davis were used as the primary technical resources.

*Note: Though only some modules are outlined as resources for specific objectives, all Individual Learning Modules can be used for the instruction of Essential Skills.*

The information presented here has been designed to act only as a guide and may, therefore, need to be adapted to meet the needs of individuals or groups. It is the role of you, the instructor, to choose materials and deliver its content as it best suits individual learner needs. A variety of materials are listed under each set of competencies for this purpose.
Cabinetmakers and Numeracy

Cabinetmakers often use the skills outlined in the Principles of Mathematics on a daily basis to complete job tasks. The complexity of these tasks, according to Human Resources and Skills Development Canada’s Essential Skills profile [http://www.hrsdc.gc.ca/eng/workplaceskills/essential_skills/general/home.shtml](http://www.hrsdc.gc.ca/eng/workplaceskills/essential_skills/general/home.shtml), ranges from simple, clearly-defined mathematical operations (e.g., measure length of building material) to tasks that involve multiple steps of calculation (e.g., lay out curves for the finished ends of a cabinet, using a compass).

PM1 Use Calculators

Upon completion of this objective, learners will be able to:

1.1 identify the risks and benefits involved in using calculators in the trade
1.2 describe how calculators are used in the trade
1.3 determine the best calculator for the trade
1.4 use knowledge of calculators to solve problems

Note: Calculators are used to improve speed and accuracy of calculations, however, it is important to note that calculators are tools and are only accurate if they are used properly. It is very important to have an understanding of order of operations when using calculators.

Only resources that specifically refer to calculators are outlined here, however, calculator-use skills should be practised with all identified resources.

Non-contextualized Resources:

- Introductory Technical Mathematics, 5th Edition (pp. xx-xxi)

Contextualized Resources:

- Fundamentals of Mechanical and Electrical Mathematics
- Individual Learning Module 020108a - Carpenter- Basic Math Concepts - First Period
- Mathematics for Carpentry and the Construction Trades
- NWT Apprenticeship Support Materials Module 1 (Foundations)
- Practical Problems in Mathematics for Carpenters (Preface, p. viii)
- Mastering Math for the Building Trades

Technical Resources:

PM2 Use Positive and Negative Numbers

Upon completion of this objective, learners will be able to:

2.1 read positive and negative numbers
2.2 write positive and negative numbers
2.3 round positive and negative numbers
2.4 estimate positive and negative numbers
2.5 order positive and negative numbers
2.6 compare positive and negative numbers
2.7 add positive and negative numbers
2.8 subtract positive and negative numbers
2.9 multiply positive and negative numbers
2.10 divide positive and negative numbers
2.11 use knowledge of positive and negative numbers to solve problems

Non-contextualized Resources:

- Introductory Technical Mathematics, 5th Edition
- Fundamental Mathematics, 4th Edition
- Pre-Apprentice Training - A Test Preparation Manual for the Skilled Trades

Contextualized Resources:

PM4 Use Fractions

Upon completion of this objective, learners will be able to:

4.1 read fractions
4.2 write fractions
4.3 compare fractions
4.4 round fractions
4.5 simplify fractions
4.6 add fractions
4.7 subtract fractions
4.8 multiply fractions
4.9 divide fractions
4.10 use knowledge of fractions to solve problems

PM5 Use Mixed Numbers

Upon completion of this objective, learners will be able to:

5.1 read mixed numbers
5.2 write mixed numbers
5.3 compare mixed numbers
5.4 round mixed numbers
5.5 simplify mixed numbers
5.6 add mixed numbers
5.7 subtract mixed numbers
5.8 multiply mixed numbers
5.9 divide mixed numbers
5.10 use knowledge of mixed numbers to solve problems

**PM6  Use Decimals**

Upon completion of this objective, learners will be able to:

6.1 read decimals
6.2 write decimals
6.3 estimate decimals
6.4 round decimals
6.5 add decimals
6.6 subtract decimals
6.7 multiply decimals
6.8 divide decimals
6.9 use knowledge of decimals to solve problems

**Non-contextualized Resources:**

- Individual Learning Module 360214bC – Cabinetmaker - Large Job Material Takeoff and Costing - Part C - Practical Trade Calculations - Second Period

Online Resources:

- http://www.khake.com/page47.html
PM8 Use Conversion

Upon completion of this objective, learners will be able to:

8.1 explain the purpose of mathematical conversion
8.2 convert among fractions, decimals, and percent
8.3 use automatic recall of decimal and percent equivalents of common fractions
8.4 use knowledge of conversion to solve problems

Learners will understand why conversion is important to the cabinetmaker trade and will solve problems using conversion including decimals of a foot conversion and time conversion.

Non-contextualized Resources:

- Practical Problems in Mathematics for Carpenters
- Mastering Math for the Building Trades
- Practical Shop Math

Technical Resources:

- Individual Learning Module 360108 – Cabinetmaker - Basic Math Concepts - Trade Math - First Period
- Individual Learning Module 360108c – Cabinetmaker - Calculating Ratio and Proportion and Percentage - Trade Math - First Period
- Individual Learning Module 360213aB – Cabinetmaker - Trade Math Review - Part B - Trade Math - Second Period

Online Resources:

- http://www.khake.com/page47.html
PM9 Use Measurement Systems

Upon completion of this objective, learners will be able to:

9.1 demonstrate uses of specific measurements
9.2 perform conversions within the metric measurement system
9.3 perform conversions within the imperial measurement system
9.4 perform conversions between the metric and imperial measurement systems
9.5 perform time conversions
9.6 use knowledge of measurement and time conversion to solve problems

Non-contextualized Resources:

- Introductory Technical Mathematics, 5th Edition
- Math to Build On - A Book for Those Who Build
- Pre-Apprentice Training - A Test Preparation Manual for the Skilled Trades

PM10  Use Rate, Ratio and Proportion

Upon completion of this objective, learners will be able to:

10.1 describe the differences among rate, ratio and proportion
10.2 give examples of how rate, ratio and proportion are used in the trade
10.3 write numbers as proportions
10.4 use knowledge of rate to solve problems
10.5 use knowledge of ratio to solve problems
10.6 use knowledge of proportion to solve problems, for example:
   ✓ solve problems that involve writing proportions and solving unknown
     quantities
   ✓ distinguish between direct and indirect proportion

PM12 Solve Equations

Upon completion of this objective, learners will be able to:

12.1 write variable expressions and equations from sentences
12.2 simplify variable expressions
12.3 write equations from sentences
12.4 solve one-step equations
12.5 solve two-step equations
12.6 solve multi-step equations

Oral Communication (OC) Learning Outcome: Learners will perform tasks which use speech to give and exchange thoughts and information.

**OC1 Demonstrate an Understanding of Oral Communication**

- 1.1 Differentiate between oral and other forms of communication
- 1.2 Identify purpose of oral communication
- 1.3 Identify the benefits of effective oral communication
- 1.4 Identify barriers to effective oral communication
- 1.5 Identify the risks associated with ineffective oral communication
- 1.6 Outline ways to reduce the risk of ineffective communication

**OC2 Communicate Effective Messages**

- 2.1 Identify audience
- 2.2 Identify the purpose of communicating effective messages
- 2.3 Organize thoughts and ideas
- 2.4 Communicate effectively to a variety of audiences

**OC3 Listen Effectively**

- 3.1 Identify the difference between listening and active listening
- 3.2 Identify the purpose of effective listening
- 3.3 Identify active listening strategies
- 3.4 Implement active listening strategies

**OC4 Respond to Oral Communication**

- 4.1 Identify the main idea
- 4.2 Interpret verbal messages
- 4.3 Clarify received verbal messages
- 4.4 Respond appropriately to verbal messages
Learners will perform tasks which use speech to give and exchange thoughts and information

Introduction

Success in technical training and effective job performance require strong Essential Skills. Although all Essential Skills contribute to success, this guide is intended to help apprentices develop positive oral communication (OC) for their trade. Competence in oral communication provides the foundation for better performance in technical training, on the job, and when mentoring new apprentices.

Strong oral communication skills are required in every occupation. In fact, many surveys indicate that it is one of the most highly valued skills among employers as it is intimately tied to everyday workplace functions. Oral communication in trade occupations is usually presented face-to-face, by telephone, or by two-way radio with a number of factors affecting the transfer of the message.

The following guide is an introduction to the basic principles and methods of oral communication with an emphasis on the importance of speaking, listening and interacting in the context of customer service and interpersonal communication.

A list of resources (see Appendix A) has been outlined for each objective in the Oral Communication Curriculum Framework and, where possible, includes online website materials that complement these resources. All information is presented in a generic manner; the contextualization to specific trades will be found in the expected tasks of each trade, determined by the instructor.

The list of resources has been designed to act only as a guide and may, therefore, need to be adapted to meet the needs of individuals or groups. It is the role of you, the instructor, to choose materials and deliver its content as it best suits individual learner needs. A variety of materials are listed under each set of competencies for this purpose.

Oral Communication in Trades Occupations

To make the most of technical training, apprentices need to develop strategies for effective listening, as well as the confidence and speaking skills to ask for help. These same strategies are used in the workplace to interact with co-workers, supervisors, workers in other trades, suppliers and customers. Understanding the many elements in the communications process helps apprentices send clear messages and understand the messages received.
Trades people communicate orally on a daily basis to complete job tasks. The complexity of these tasks, according to Human Resources and Skills Development Canada’s Essential Skills Profiles (http://srv108.services.gc.ca/), varies slightly among the thirteen trades outlined in the Trade Essentials project (See Curriculum Guidebook), though all thirteen trades describe the least complex oral communication tasks as those containing some or all of the following characteristics:

- Limited oral communication demands;
- Narrow range of subject matter;
- Familiar topic;
- One main issue;
- Factual, literal, or concrete language;
- Narrow range of content and context-specific or technical vocabulary;
- Clearly defined role of speaker;
- Interaction with one person at a time;
- Low risk;
- Brief exchange (less than 10 minutes)

The most difficult tasks vary among the trades. The most complex tasks performed by cooks, welders, carpenters, automotive service technicians, steamfitters-pipefitters, cabinetmakers, machinists, industrial and construction electricians and metal fabricators contain some or all of the following characteristics:

- Extensive oral communication demands;
- Significant range of subject matter;
- Professional, organizational, theoretical social issues;
- Abstract and conceptual language;
- Extensive range of technical vocabulary and idiom;
- Complex and detailed information content;
- Unpredictable context;
- Various communication venues used;
- Significant range of formats and styles;
- Communicator may have more than one role;
- New and unfamiliar situation and setting;
- Medium to extended (30+ minutes) exchange;
- Significant noise or interference;
- Significant level of risk;

The most complex oral communication tasks performed by plumbers, oil burner mechanics, and refrigeration and air conditioning mechanics contain some or all of the following characteristics:

- Moderate oral communication demands;
- Narrow range of subject matter;
- Familiar topic;
ESSENTIAL SKILLS

ORAL COMMUNICATION GUIDELINES

- Usually one main issue;
- Factual or concrete and abstract language;
- Moderate range of general and context-specific or technical vocabulary and idiom;
- Moderately complex and detailed content;
- Less predictable context;
- Interaction is frequently one-on-one or with several people;
- Give directions to a small group;
- Select from a moderate range of formats and styles;
- Established rules;
- Brief to moderate (10-30 minutes) exchange;
- Physical conditions may impede communication;
- Moderate level of risk;
- May be one-on-one hostility

Upon completion of this course, apprentices will better understand how communication skills impact safety, productivity, job satisfaction and job progression. Effective communication skills will benefit apprentices as they reach journeyperson status and as they accept additional responsibility for supervising and mentoring new employees.

For specific information and examples of the use of oral communication for each trade, instructors should refer to the Essential Skills profile and the National Occupational Analysis. It should be noted that, according to HRSDC’s Essential Skills profiles, oral communication is one of the most important Essential Skills for cooks, plumbers and automotive service technicians as these tradespeople interact frequently with customers.

Note: It is intended that the Oral Communication curriculum be embedded in other Essential Skills curriculum where possible. Many of the competencies in oral communication and the five other Essential Skills may be mastered concurrently.

General Online Resources:

**Essential Skills Profile and Readers Guide**
Human Resources and Skills Development Canada
http://srv108.services.gc.ca/english/general/home_e.shtml

**National Occupational Analysis**
http://www.red-seal.ca/Site/trades/analist_e.htm
OC1 Demonstrate an Understanding of Oral Communication

Upon completion of this objective, learners will be able to:

1.1 differentiate between oral and other forms of communication
   - distinguish between verbal and non-verbal communication
1.2 identify the purpose of oral communication
1.3 identify the benefits of effective oral communication
   - project a professional image through oral communication
1.4 identify barriers to effective oral communication
   - identify how the following can produce barriers: sender, listener, content, environment
   - outline personal habits that may interfere with effective oral communication: tone, volume, voice speed, facial expression, eye contact, etc.
1.5 identify the risks associated with ineffective oral communication
1.6 outline ways to reduce the risk of ineffective oral communication

Suggested Strategies and Activities:

- Hold a general discussion on benefits of effective oral communication
- Ask learners for examples of workplace communication, both effective and ineffective, and the consequences of each
- Refer to Essential Skills profile for the trade and find examples of the various types of communication and the purpose
- Discuss the factors that determine whether the communication is either simple or complex
- Explain the elements of communication
- Discuss the difference between, and the importance of, both verbal and non-verbal communication
- Discuss specific, common barriers as they relate to the trade
- Provide learners with an opportunity to assess areas of strength and those areas where they should improve
- Establish some rules for effective communication in class
- Have learners reflect upon communicative challenges in everyday life

Resources:

- Applied Communication Skills for the Construction Trades
- Tools for Success: Soft Skills for the Construction Industry
- Business English and Communication, 5th Canadian Edition
- Effective Workplace Communication, 3rd Edition
- Communicating in the Workplace, 6th Canadian Edition

Online Resources:

OC2 Communicate Effective Messages

Upon completion of this objective, learners will be able to:

2.1 identify audience
2.2 identify the purpose of communicating effective messages
2.3 organize thoughts and ideas
2.4 communicate effectively to a variety of audiences
   - use non-verbal techniques to reinforce the verbal message
   - use appropriate terminology
   - communicate one-on-one
   - participate in group discussions
   - present information to groups

Suggested Strategies and Activities:

- Ask learners to identify the different people they speak with at work (e.g., project managers, supervisors, foremen, co-workers, workers in other trades, customers, suppliers)
- Discuss the differences in communicating with each audience
- Ask learners to think about the jargon, technical language and abbreviations that are used in their trade and the appropriateness of using this language with each audience
- Increase awareness of poor speech habits by creating a list of those that learners have observed
- Identify and discuss significance of non-verbal communication such as facial expression, posture and gestures
- Identify strategies for effective telephone communication, use of cellular telephone and two-way radio
- Provide opportunities for learners to give instructions in class setting by giving oral instructions to others one-on-one or to the group
- Provide opportunities for engaging learners in discussion
- Encourage speaking in class to increase learner confidence
- Hand out materials on effective participation in meetings/group discussions
- Provide opportunities for learners to share information in the form of a short presentation on a topic that they are comfortable with using a visual aid such as a picture, sketch, diagram to increase understanding
- Use the process of giving and receiving of feedback as a communication situation
- Create a safe atmosphere for giving and receiving feedback on communication style
- Assign learners the task of leading the class through some of the assigned material

Online Resources:

OC3  Listen Effectively

Upon completion of this objective, learners will be able to:

3.1 identify the difference between listening and active listening
3.2 identify the purpose of active listening
3.3 identify active listening strategies
3.4 implement active listening strategies

Suggested Strategies and Activities:

- Discuss the importance of good listening skills in a variety of situations at work
- Define active listening
- Identify barriers to effective listening
- Have learners think about and monitor their listening skills
- Identify strategies for active listening including paraphrasing, questioning and note-taking
- Practice strategies for active listening
- Encourage learners to implement active listening strategies during training and on the job
- Have learners receive and follow up on messages and instruction

Resources:

- Effective Workplace Communication, 3rd Edition
- Tools for Success: Soft Skills for the Construction Industry
- Applied Communications Skills for the Construction Trades
- Business English and Communication, 5th Canadian Edition
- Communicating in the Workplace, 6th Canadian Edition

Online Resources:

OC4   Respond to Oral Communication

Upon completion of this objective, learners will be able to:

4.1  identify the main idea
4.2  interpret verbal messages
   ▪ differentiate among fact, opinion and feeling
   ▪ distinguish between relevant and irrelevant information
   ▪ identify the role of non-verbal messages in oral communication
4.3  clarify received verbal messages
   ▪ ask questions to understand
   ▪ summarize and restate information
4.4  respond appropriately to verbal messages

Suggested Strategies and Activities:

▪ Discuss the role of intonation, posture, gestures, tone of voice, facial expression and eye movement
▪ Have learners recognize and interpret visual cues (e.g., gestures, facial expression) to help understand messages
▪ Discuss “vocally produced noises” (e.g., ah)
▪ Have learners brainstorm common “vocally produced noises”
▪ Discuss how emotion can impact oral communication
▪ Have learners listen and respond to the viewpoints of others by asking relevant questions, offering opinions and/or interpretations
▪ Use suitable resources for discussion (e.g., newspaper or magazine article on trade-related material)
▪ Have learners judge what information is relevant in verbal messages and trade-related material

Resources:

▪ Applied Communication Skills for the Construction Trades
▪ Tools for Success: Soft Skills for the Construction Industry
▪ Effective Workplace Communication, 3rd Edition
▪ Business English an Communication, 5th Canadian Edition
▪ Communicating in the Workplace, 6th Canadian Edition

Introduction

The workforce is constantly changing. Today’s employees are highly mobile, expect continuous learning to be an integral part of their job, and are adapting to a technological world. In fact, technology has changed the very fabric of the workplace and, as a result, workers are expected to acquire a broad range of skills if they are to remain current, accurate and competitive. Trades occupations are no exception. For example, automation in plants and factories has demanded an increased knowledge of networking and software use; lathes and cutting tools are often linked to computers; and entrepreneurs require skills in word processing, accounting, email and Internet use, and database management.

This Computer Use (CU) course has been designed to help workers adapt to this ever-changing society. It is intended for individuals who are inexperienced computer users but who want to gain some hands-on skill and confidence. It assumes no previous knowledge of computers and will provide learners with a broad overview of computer and internet technology. The following major topic areas are explored:

- Computer Operations
- File Management
- Email
- Safe Use of Computers
- Word Processing
- Spreadsheets
- Web Browsing

This following guide outlines a list of recommended resources (See Appendix A) for each objective in the Computer Use curriculum framework and, where possible, includes online website materials that complement these resources. Because computer skills are generic in the workplace, this course is not contextualized to specific trades. Apprentices, however, should be provided with examples of how computers are used in their respective trade. Contextualized website lists are provided in Appendix B.

The list of resources has been designed to act only as a guide and may, therefore, need to be adapted to meet the needs of individuals or groups. It is the role of you, the instructor, to choose materials and deliver its content as it best suits individual learner needs. A variety of materials are listed under each set of competencies for this purpose.

Note: The Computer Use curriculum can be used in one of two ways: as a stand-alone course or embedded in other Essential Skills curriculum. For instance, computer use competencies (e.g., email, word processing) and writing competencies may be mastered concurrently.
CU1 Use Computer Operations

Upon completion of this objective, learners will be able to:

1.1 identify the primary components of a computer – monitor, keyboard, mouse, system unit, ports, disk drives, printers
1.2 describe the function of the primary components of a computer
1.3 start up the computer, monitor and printer
1.4 shut down the computer, monitor and printer
1.5 log onto a network using a personal password
1.6 demonstrate basic troubleshooting strategies
   ▪ protect and care for flash drives, CD ROMs and other media
   ▪ clean computer components
   ▪ maintain back-up copies of documents
   ▪ perform basic maintenance

Resources:

▪ Essential Skills for Digital Literacy - IC3 Module A ~ Courseware 2105-2 - Computing Fundamentals using Windows XP

▪ [www.bcot1.com/](http://www.bcot1.com/)
CU2  Use Word Processing Skills

Upon completion of this objective, learners will be able to:

2.1 open and close software
2.2 create written documents
2.3 create tables, graphs and charts
2.4 open existing written documents, tables, graphs and charts
2.5 save written documents, tables, graphs and charts
2.6 preview and print written documents, tables, graphs and charts
2.7 copy and move text
2.8 delete text
2.9 format text
   • change font
   • highlight text
   • italicize, bold and underline text
2.10 set tabs
2.11 set margins
2.12 add and delete headers and footers
2.13 add and delete page numbers
2.14 set page layout
2.15 check and correct spelling
2.16 check and correct grammar
2.17 use thesaurus

CU3 Use File Management Skills

Upon completion of this objective, learners will be able to:

3.1 distinguish between files and folders
3.2 create files and folders
3.3 save files
3.4 copy files and folders
3.5 move files and folders
3.6 organize files and folders
3.7 rename files and folders

CU4 Use Spreadsheets

Upon completion of this objective, learners will be able to:

4.1 identify the purpose of spreadsheets in the trade
4.2 interpret information in existing spreadsheets
4.3 enter data into existing spreadsheets
4.4 manipulate data within an existing spreadsheet
4.5 create spreadsheets
4.6 create and copy formulas to perform calculations
4.7 print spreadsheets
4.8 print selected parts of spreadsheets

CU5  Read and Write Email Messages

Upon completion of this objective, learners will be able to

5.1 open messages
5.2 reply to messages
5.3 write, send and forward messages
5.4 print messages
5.6 add attachments to messages
5.7 delete messages
5.8 create folders
5.9 move messages to folders
5.10 delete folders
5.11 identify and manage common email problems

**Introduction**

Effective written communication is the backbone to any workplace or organization. More specifically, good communication skills reduce the chance of faulty interpretation which, in turn, allows for maximum productivity.

As the economy changes so too does the workplace. Necessary reorganization and technological change demand that workers who would generally not be responsible for a high level of workplace writing are now expected to communicate internally and externally on a regular basis though memos, emails, faxes and reports.

The following guide is an introduction to the key writing skills workers need to deal effectively with everyday written correspondence and business communications and provides strategies to help learners improve their ability to write.

A list of resources (see Appendix A) has been outlined for each objective in the Writing Curriculum Framework and, where possible, includes online website materials that complement these resources. All information is presented in a generic manner; the contextualization to specific trades will be found in the expected writing tasks of each trade, determined by the instructor.

The following information has been designed to act only as a guide and may, therefore, need to be adapted to meet the needs of individuals or groups. It is the role of you, the instructor, to choose materials and deliver its content as it best suits individual learner needs. A variety of materials are listed under each set of competencies for this purpose.

Outlined below are examples of writing tasks performed by tradespeople. These tasks may be used as a basis for writing expectations.

---

**Examples of Writing Tasks**

- Incident/accident reports
- Detailed lists of materials needed for a job
- Inventory lists
- Brief descriptions of work for invoices
- Progress notes
- Proposals
- Meeting minutes
- Emails/memos
- Quotations
- Material requests
- Daily logbook
- Informative notes to co-workers
- Safety guidelines
- Technical service reports
WR1 Plan the Writing Process

Upon completion of this objective, learners will be able to:

1.1. identify purpose
1.2. identify audience
1.3. identify the most effective writing format for task

SECTION 1 - INTRODUCTION
Points to Consider
- 80% of learning in a trade happens in the workplace.
- Every workplace in every province and territory has its own unique learning culture.
- Each journeyperson has their individual approach to guiding an apprentice.
- Every apprentice will write the same national exam.

Background
The road to a trade certification has many paths. For an apprentice who has not taken the pre-apprentice training and Block/Period/Level in-school route, it can be a difficult road to navigate. The primary focus appears to be accumulating enough hours for eligibility to challenge the Interprovincial (Red Seal) Exam.

The one tool that is available, if an apprentice chooses the Block/Period/Level route, is the Provincial Log Book. This Log Book tracks the Blocks, Tasks and Sub-tasks that an apprentice has learned in the workplace. For apprentices who have chosen the route through which 100% of their learning happens in the workplace, it can be difficult to “know what you don’t know.” On this path, the apprentices never had a log book, so in order to challenge, they have their journeyperson sign off on the blocks when they have accumulated the hours required to challenge the IP certification exam in their trade.

Provincial/territorial log books are developed from the National Occupational Analysis (NOA) in a trade. Most apprentices are never introduced to the NOA of their trade even though it is used to develop trades curriculum, block/period/level tests and the IP exam.

Technical Skills Inventory (TSI)
The Technical Skills Inventory (TSI) is created from the NOA. It is a self-assessment tool designed to give apprentices the opportunity to reflect on their technical skills, identify skills gaps and make a plan to fill those gaps before they challenge the IP exam.

The TSI also provides information for Essential Skills assessors to create technical skills learning plans for individual apprentices and Essentials Skills program instructors. These learning plans are used by the instructor and the apprentice to select technical skills resources that supportEssential Skills learning programs.

Feature
The TSI “Group Summary” has formulas imbedded so data can be easily extracted and manipulated for presentation in a pie chart format.
SECTION 2 - NATIONAL OCCUPATIONAL ANALYSIS (NOA) – TECHNICAL SKILLS INVENTORY (TSI) DIAGRAM

**The NOA is the national standard for a trade and it is:**

- a list of all the skills in a trade;
- used to create curriculum for trade school programs and Block Release/Period programs in a trade;
- used to create a log book that records an apprentice’s progress in the general skill areas of a trade;
- used to create all the questions for the Interprovincial (Red Seal) Exam.

**The TSI is created from the NOA and**

- gives a general picture of the technical skills required for a trade;
- contains the same information as an apprentice log book;
- guides an instructor in choosing learning materials for an Essential Skills program.
SECTION 3 - ASSESSOR’S GUIDE

STEP ONE: INTRODUCE PARTICIPANTS TO THE NATIONAL OCCUPATIONAL ANALYSIS (NOA)

Rationale

**National Occupational Analysis (NOA)**

The NOA is recognized as the national standard for all trades. There is an NOA for each trade in Canada and, although the NOAs are readily accessible online, few tradespeople take advantage of this information. (To access NOAs on-line, go to [www.red-seal.ca](http://www.red-seal.ca) and click on national occupational analysis.)

**NOA Background**

An NOA is reviewed and revised at least every five years. Each NOA is developed by a Joint Planning Committee and the Interprovincial Program Guide Working Group, comprised of industry and instructional representatives in a specific trade from each province and territory in Canada. All Joint Planning Committees operate under the auspices of the Canadian Council of Directors of Apprenticeship (CCDA) which recognizes the NOA as the key document in an occupation. The CCDA consists of directors/managers of apprenticeship from every province and territory in Canada.

The NOA:

- lists every technical skill requirement in a trade;
- is used to create the Apprentice Log Book in a trade;
- is used to develop curriculum for trades training programs; and
- is used to develop the questions for Interprovincial (Red Seal) Exam.

**Activity**

**Preparation**

Have an NOA printed for each participant. Ensure each NOA has page indicators at these sections:

- Analysis
- Tools and Equipment
- Glossary
- Exam Components

**NOTE:** Move pie chart to the first page of the exam component section.
Timeline

The first night of class

Direction

Ask the participants if they have ever used, or worked in, an NOA before. If so, engage him/her in a discussion of where they used it and in what context. Then:

- distribute an NOA to each participant;
- review the development and layout of the document;
- emphasize the use of the document, e.g., creating a log book, curriculum, possible exam questions, etc.; and
- review each section of the document with particular attention to the Blocks, Tasks and sub-tasks in the Analysis section.
STEP TWO: INTRODUCE PARTICIPANTS TO THE TECHNICAL SKILLS INVENTORY (TSI)

Rationale

Technical Skills Inventory (TSI)

The TSI is created from the NOA. It gives a general picture of the technical skills required for a trade by listing the Blocks, Tasks and Sub-tasks in the trade. The TSI:

- Contains the same information as the Apprentice Log Book in a trade;
- Provides the participant with an opportunity to self-assess his/her general skills in their trade; and
- Guides the instructor in choosing contextualized resources for the Essential Skills program.

TSI Terminology

Two sets of terms can be used depending on where a participant learns and works in their trade. In this TSI Document, you will find the common terminology listed first. It is followed by the competency-based terminology in italics and underlined.

**TSI Terminology**

- Blocks - *Learning Categories*:
- Tasks - *Learning Outcomes*:
- Sub-tasks - *Learning Objectives*

By completing this Technical Skills Inventory (TSI) the participant will:

- be introduced to the blocks *(learning categories)*, the tasks *(learning outcomes)*, and the sub-tasks *(learning objectives)* in the NOA;
- reflect on his/her technical skills, then list what he/she knows and can do;
- document any technical skills gaps the participant may have;
- help create a group learning needs profile to assist curriculum developers and the instructor gather learning materials specific to a trade for an Essential Skills Program; and
- help the participant make a plan for any technical skills they may need to learn or improve.
Activity

**Preparation**

Print an NOA Analysis Diagram for each participant.

Print a Learners Guide – Technical Skills Inventory (TSI).

Print a personalized TSI for each participant.

**Timeline**

The first night of class

**Direction**

Distribute an NOA Analysis Diagram to each participant in the program and review the content with him/her. Then:

- Distribute the Learner’s Guide – Technical Skills Inventory (TSI) to each participant;
- Distribute the personalized TSI to each participant;
- Summarize the directions for completing the TSI;
- Advise the participants to review each sub-task and put a ✓ in the column that best describes their self-assessment of their skill:
  - Yes, I did this
  - I need to work on this
  - Not sure what this means
- Advise participants to include any comments they may have; and
- Collect TSIs when participants have completed them.

It should take approximately 20 minutes for a participant to complete their individual TSI. If some take longer, do not rush them.

Advise participants that you will meet with them at the **half-way** point of the program to give them feedback on their TSI. Advise them that in the meantime, you will be collecting the information from each TSI and compiling it for the instructor so he/she can prepare materials for the Essential Skills Program.
STEP THREE: COMPILE DATA FOR THE INSTRUCTOR

Rationale

The Essential Skills Programs at Trade Essentials are contextualized to the trade. This results in participants being easily engaged in their learning because they relate to the materials that support concepts and applications in their trade. Data collected through the TSI guides the instructor as to what contextual and technical resources will best engage his/her participants.

Timeline

Within 24 to 48 hours of the participants completing the TSI, provide the instructor with a TSI Group Summary Chart and Group Learning Plan.

Activity

Preparation

Develop a TSI Group Summary Chart

- Complete an Excel spreadsheet assigning one column to each participant;

- Assign the number code to each TSI column
  - 0 to the first column – Yes, I did this
  - 2 to the second column – I need to work on this
  - 3 to the third column – Not sure what this means

- Collect the data from the TSI and transfer it to the spreadsheet; and

- The 2s will automatically highlight in yellow and the 3s in blue so the instructor can easily identify a participant who has a learning need that differs significantly from the group;

- A group summary chart will appear at the bottom of your spreadsheet.
Direction

- Create a Pie Chart to produce a visual depiction of a group’s learning needs
  - Highlight the entire “Summary Chart” on the last page of your spreadsheet.
  - On the tool bar, choose the “Chart Wizard” (Microsoft Office Excel 2003)
  - Under chart “Chart type” choose “Pie”
  - Under “Chart Sub-Type” choose the first Pie picture
  - Click “Next”
  - Choose “Data Range” and “Columns” then click “Next”
  - Choose “Titles” and fill in “Chart Name” (Group Location and Trade)
  - On the same tool bar, choose “Legend” then “Bottom”
  - On the same tool bar choose “Data Labels” then choose “Category Name,” “Value,” and “Legend Key,” then click “Next”
  - Under Chart Location choose “As New Sheet” and click “Finish”
  - To change a colour of a piece of the pie chart so 2s and 3s in the same piece of the pie match,
    - click inside the pie
    - click on the piece of pie you want to change
    - double click on that same piece and the colour chart will appear
    - choose your colour
  - To move or adjust items in the pie chart, right click on the pie chart, choose “Edit” then choose the item you want to adjust or move. Click outside the chart when you are finished
  - Choose “Edit”, then “Copy” the pie chart and “Paste” it into the “Group Learning Plan”

- Provide the instructor with a copy of both the TSI Group Summary Chart and the Group Learning Plan within 24 to 48 hours so he/she can choose appropriate learning resources; and put one copy of the TSI Group Summary and the Group Learning Plan Pie Chart in the office files.
Sample Pie Chart

Group Learning Plan - Cabinet Maker, Souris

- BLOCK A SE2 Occupational Skills, 22
- BLOCK A SE3 Occupational Skills, 36
- BLOCK B SE2 Machining, 12
- BLOCK B SE3 Machining, 18
- BLOCK C SE2 Forming and Laminating, 2
- BLOCK C SE3 Forming and Laminating, 9
- BLOCK D SE2 Veneers and Laminates, 2
- BLOCK D SE3 Veneers and Laminates, 9
- BLOCK E SE2 Shop Assembly, 6
- BLOCK E SE3 Shop Assembly, 12
- BLOCK F SE2 Finishing, 6
- BLOCK F SE3 Finishing, 12
- BLOCK G SE2 On-Site Assembly and Installation, 14
- BLOCK G SE3 On-Site Assembly and Installation, 18
- BLOCK H SE2 Specialized Operations, 14
- BLOCK H SE3 Specialized Operations, 18

Page 225
STEP FOUR: ASSIST THE PARTICIPANT TO DEVELOP AN INDIVIDUAL TECHNICAL SKILLS LEARNING PLAN

Rationale

Information from the TSI is used to create an individual report for each participant. This report includes:

- Information on the TSI so the participant has a record of how he/she completed this tool;
- A Pie Chart that provides a visual depiction of the participant’s learning needs; and
- A series of questions that result in each participant developing an individual technical skills learning plan.

Timeline

At the mid-point of the Essential Skills Program, provide participants with feedback on their TSI. This timeline:

- gives the participant an opportunity to focus entirely on their Essential Skills for the first few weeks of the program;
- gives the participant time to evaluate if, through their Essential Skills studies, they have discovered that their technical learning needs are more extensive than they previously assessed through their TSI;
- creates an opportunity for the participant to share how they are adjusting to a learning environment with someone other than the instructor; and
- provides an opportunity for the assessor to gather information from each participant to determine if resources and instruction are meeting their learning needs.

Activity

Preparation

Develop an Individual Learning Needs Plan Pie Chart for each participant to produce a visual depiction of a participant’s learning needs.
Direction

- Transfer each participant’s total for each Block both SE 2 - I need to work on this and SE 3 - Not sure what this means into a Pie Chart;
  - Highlight all of the Block titles in the “Summary Chart” on the last page of the spreadsheet
  - Hold down the Control Key (Ctrl) on your keyboard
  - Highlight one client column
  - On the tool bar, choose the “Chart Wizard” (Microsoft Office Excel 2003)
  - Under chart “Chart type” choose “Pie”
  - Under “Chart Sub-Type” choose the first Pie picture
  - Click “Next”
  - Choose “Data Range” and “Columns” then click “Next”
  - Choose “Titles” and fill in “Chart Name” (Client name and Trade)
  - On the same tool bar, choose “Legend” then “Bottom”
  - On the same tool bar choose “Data Labels” then choose “Category Name,” “Value,” and “Legend Key,” then click “Next”
  - Under Chart Location choose “As New Sheet” and click “Finish”
  - To change a colour of a piece of the pie chart so 2s and 3s in the same piece of the pie match,
    - click inside the pie
    - click on the piece of pie you want to change
    - double click on that same piece and the colour chart will appear
    - choose your colour
  - To move or adjust items in the pie chart, right click on the pie chart, choose “Edit” then choose the item you want to adjust or move. Click outside the chart when you are finished.
  - Choose “Edit”, then “Copy” the pie chart and “Paste” it into the “Individual Learning Plan”
Feedback

- Schedule a one-on-one TSI feedback appointment with each participant during which you compare and discuss their Individual Learning Needs Pie Chart with the group Learning Needs Pie Chart.

- Complete the Individual Learning Plan with the participant.

- Make 2 copies of the Individual Learning Plan. Put one copy in office file and one copy in your files.

- Give the original TSI and the original Individual Learning Plan back to the participant.

Each one-on-one meeting with a client should average 20 to 30 minutes.

Sample Pie Chart

J. Doe - Individual Learning Plan - Cabinet Maker, Souris
SECTION 4 - LEARNER’S GUIDE

Key Document in your Trade

The National Occupational Analysis (NOA) is a trade document approved nationally and used in each province and territory across Canada. The NOA lists every technical skill required to be successful in your trade. Each NOA is used to:

- create the apprentice log book in your trade;
- develop curriculum for trades training programs; and
- prepare questions for Red Seal exams.

Technical Skills Inventory (TSI)

The TSI is created from the NOA. It gives a general overview of the technical skills required for your trade by listing the Blocks, Tasks and Sub-Tasks in your trade. The TSI:

- contains the same information as the apprentice log book in your trade; and
- gives you the opportunity to self-assess your general skills in your trade.

TSI Terms

Two sets of terms can be used depending on where you learn and work in your trade. In this TSI document, you will find the common terms listed first. It is followed by the competency-based terms in italics and underlined. (In the future, all NOA updates will be using competency-based terms.)

<table>
<thead>
<tr>
<th>TSI Terms</th>
<th>Common Terms</th>
<th>Competency-based Terms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blocks</td>
<td>Learning Categories</td>
<td></td>
</tr>
<tr>
<td>Tasks</td>
<td>Learning Outcomes</td>
<td></td>
</tr>
<tr>
<td>Sub-tasks</td>
<td>Learning Objectives</td>
<td></td>
</tr>
</tbody>
</table>
Why complete a TSI?

By completing this Technical Skills Inventory (TSI) you will:

- be introduced to the **blocks** *(learning categories)*, the **tasks** *(learning outcomes)*, and the **sub-tasks** *(learning objectives)* in the NOA;

- help you think about your technical skills, then help you list what you know and can do;

- help you highlight any technical skills gaps you may have;

- help create a group learning needs profile to assist the instructor gather learning materials specific to your trade and your learning needs for your Essential Skills Program; and

- help you make a plan to get any technical skills you may need to learn or skills you may want to improve.

**Directions**

Review each sub-task and put a ✔️ in the column that best describes your self-assessment of your skills:

- Yes, I did this
- I need to work on this
- Not sure what this means

Include any comments that may help the instructor choose learning materials for you.

<td></td>
<td></td>
</tr>
</tbody>
</table>

The Technical Skills Inventory (TSI) is designed to:

- introduce apprentices to the **blocks** (learning categories), **tasks** (learning outcomes) and **sub-tasks** (learning objectives) in the National Occupational Analysis (NOA).

- have apprentices **reflect** and then **self-assess** their tasks (learning outcomes) and sub-tasks (learning objectives) in their trade.

- compile information from the TSI to **create a group profile** of technical skills learning needs.

- provide information from the TSIs to assist instructors in choosing contextualized and technical skills resources to support Essential Skills curriculum that will support client needs.

The TSI assessment tool lists the block (learning categories), tasks (learning outcomes) and sub-tasks (learning objectives) identified in the National Occupational Analysis (NOA) of each trade. The TSI is a **self-assessment** tool through which an apprentice reflects and records their personal evaluation on each task and sub-task. Self-evaluation (SE) categories for the tasks (learning outcomes) and sub-tasks (learning objectives) are:

- SE 0 – Yes, I did this
- SE 2 – I need to work on this
- SE 3 – Not sure what this means

**GENERAL GROUP PROFILE:**  

**Cabinetmaker Group Souris**

Ten Cabinetmakers learners are participating in this program. The geographic territory covers from the Charlottetown area to the Eastern tip of PEI. Trade expertise within the group ranges from those working under a journeyperson in the trade to those who own their own businesses. Two have previously challenged but were unsuccessful in the Red Seal exam. Four hold Red Seal certification in the Carpentry trade.

SECTION 8 - INDIVIDUAL LEARNING PLAN AND PIE CHART (SAMPLE)

The Technical Skills Inventory (TSI) is designed to:

- introduce you to the **blocks** (learning categories), **tasks** (learning outcomes) and **sub-tasks** (learning objectives) in the National Occupational Analysis (NOA);

  *These three sections of the NOA are used in provinces and territories to create an Apprenticeship Log Book. The log book is used by apprentices and journeypersons to record and sign-off technical skill areas learned on the job.*

- help you **think about** your technical skills and then help you **list** what you know and can do;

- help you **know what technical skills to focus** on as you go through your **school training** and while you are working under the **direction of a journeyperson**;

- help you make a **technical skills learning plan** to highlight your technical skills learning needs;

- help you prepare to complete a Professional Skills Record (PSR) *(if needed)* which lists the details and **all** the skill requirements in your trade.

**Self-Assessment (SE) ratings assigned to interpret and record data are:**

- SE 0 – Yes, I did this
- SE 2 – I need to work on this
- SE 3 – Not sure what this means

Through the completion of your TSI, you have indicated that you do not have any immediate learning needs in the following block(s):

- **Block C - Forming and Laminating**
Individualized Learning Plan

The pie chart represents the learning needs you have identified in your TSI. They are listed from the most needed to the least needed.

NOTE: Any divided section of the same colour that may occur in your chart highlights where you recorded both SE 2 and SE 3 in the same block.

Technical skills self-study

Other (explain)

NOTE: To complete an in-depth, detailed self-assessment of technical skills in a trade, a Professional Skills Record (PSR) is available. (A PSR is the self-assessment tool used in a Recognizing Prior Learning (RPL) Assessment Process). Information on this process is available through the apprenticeship section of the Department of Innovation and Advanced Learning. This document is designed to be used by an apprentice in the workplace and must be signed off by a licensed journeyperson.
